Our Journey from Paper based system → IT enabled monitoring system

Urban water and sanitation in India: Scenario in the beginning of the program

Major urban projects focused mainly on infrastructure creation ... and not on service delivery !!!

Little was known about impact on improvements in service levels, quality, financial sustainability

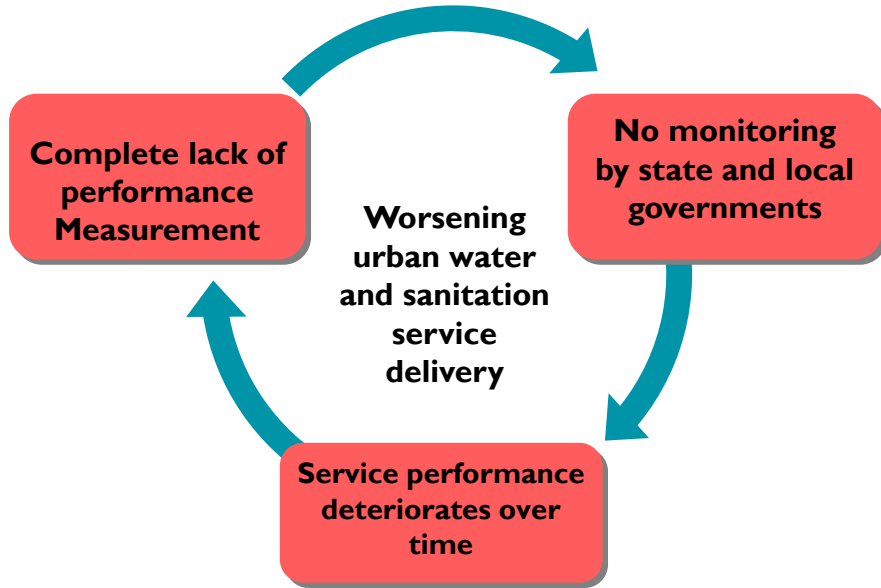

Data available with ULBs ...but it is paper based and fragmented, not collated, analyzed or reported...

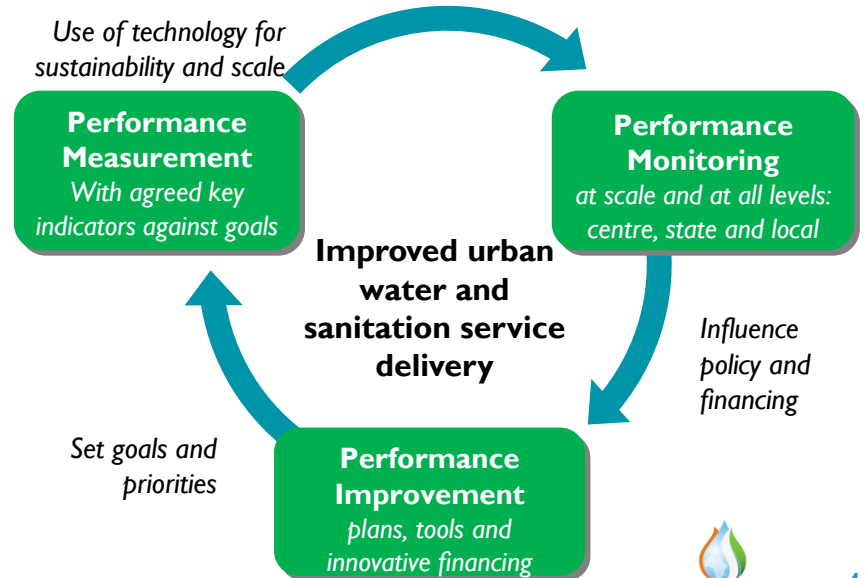

You cannot improve what you cannot measure!

PAS Approach – moving to a virtuous cycle

Measure and monitor performance to reward and learn from success and demonstrate results

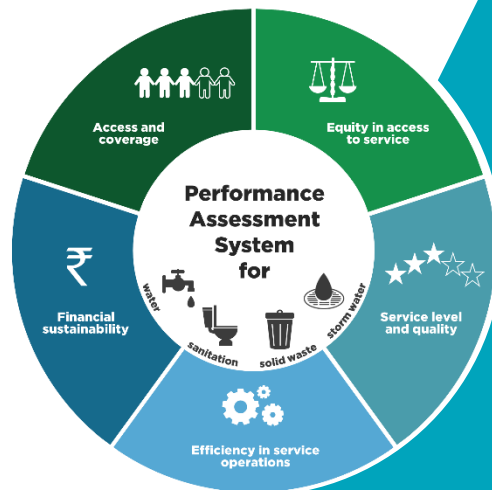

PAS - SLB+ Framework

NATIONALLY OWNED

National Technical Partner for SLB
Rolled out with State Governments

E-PLATFORM

Online module
Inbuilt validation checks
Scientific system for calculating indicators
Comparative dashboards

5 Themes

...to match with goals /targets of delivery of water supply and sanitation services

32 Key Performance Indicators

... for performance assessment

100 Local Action Indicators

...drilled down indicators for actions for performance improvement

PAS Indicators – 32 Key Indicators, 100 Drill down Indicators

WATER SUPPLY

9

SLB Indicators

35

Drill down Indicators

WASTE WATER

9

SLB Indicators

6

SAN Benchmarks

32

Drill down Indicators

SOLID WASTE

8

SLB Indicators

12

Drill down Indicators

EQUITY

4

Key Indicators

15

Drill down Indicators

STORM WATER

2

SLB Indicators

UWSS services

32

Key Indicators

100

Drill down Indicators

What set PAS apart?

Inclusive

- Indicators include onsite systems
- Indicators on equity in service
- Available in local languages

Data reliability

- Standardized system to report on quality and reliability of indicators based on source of data
- Inbuilt validation checks

Financial sustainability

- Indicators on Financial sustainability for cost recovery, collection efficiency etc.

Government ownership and responsibility

- Work at scale annually – not a one off pilot!
- Self assessment portal – information reported by officers from city governments
- Indicators on human resources, complaint redressal and resource planning and management

Assessing safe and sustainable services across the full service chain

- Monitor service provision rather than just infrastructure - Efficiency in service operations , service level and quality

SAN Benchmarks: Citywide assessment of sanitation service delivery

Capturing on-site sanitation along with conventional sewerage

Mixed (sewerage + onsite) sanitation system

| User interface | Collection | Conveyance | Treatment | Recycle & Reuse |
|----------------|------------|------------|-----------|-----------------|
|----------------|------------|------------|-----------|-----------------|

- 1. Coverage of toilets
- 2. Coverage of adequate sanitation systems

3. Collection efficiency of sanitation system (weighted average)

- 4. Adequacy of treatment capacity of sanitation system (weighted average)
- 5. Quality of treatment of sanitation system (weighted average)

6. Extent of reuse and recycling in sanitation system (weighted average)

Systematic Approach for Data Reliability Assessment

Reliability Band for Key Performance Indicators

Reliability A

Data records are updated regularly based on best available procedure

Reliability B

Data records maintained as appropriate with at least periodic updating

Reliability C

Data is extrapolated from a limited sample

Reliability D

Data is estimated without measurement or documented evidence

- Automatically calculates the reliability for an indicator with a set of questions that address the conditions in each reliability band as listed in the SLB Handbook.
- Ensures a transparent and consistent comparison across all cities.
- It also informs cities about the quality of their existing data systems, and encourages cities/state to focus on data system strengthening.

Reliability A

| Question | Options | Y/N |
|---|---|-----|
| What is the basis of estimation of HHs served with individual water supply connections? | 1. Through household surveys (1-5 yrs) | Y |
| | 2. Number of residential connections | |
| | 3. Area covered by distribution network | |
| | 4. Road covered by network length | |
| How are records of HHs served by water supply maintained? | 1. Computerized | Y |
| | 2. Only Manual | |

Self assessment portal – information reported by officers from city governments

State agencies
 State 1
 State 2
 State n

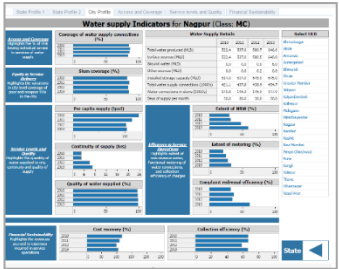

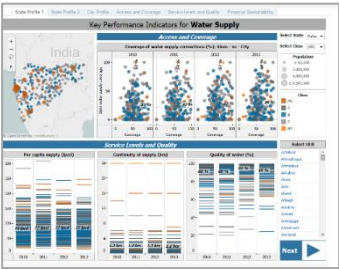

City officials
 City 1,2,3, ...
 City 1,2,3, ...
 City 1,2,3, ...

Data validation ← Data entry

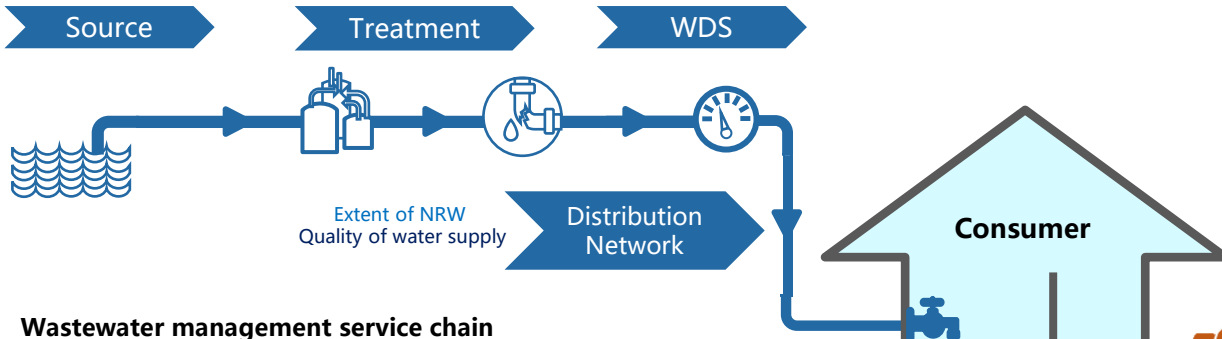

Online SLB-PAS module
 Data storage, processing
 and analysis

State analysis reports → City analysis reports → Citizens: Access to results

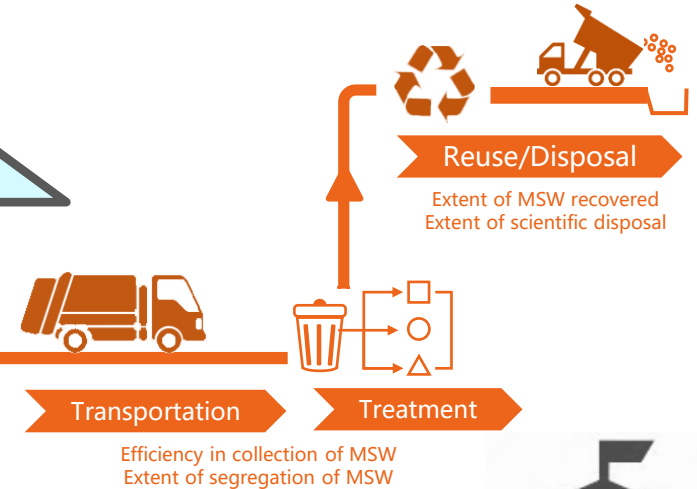

System integration - Water and Sanitation Data System Analysis across service chain

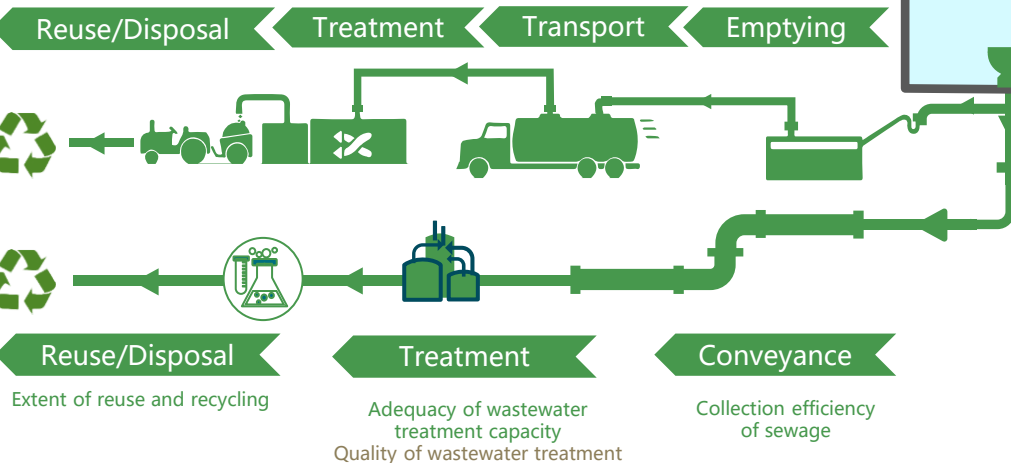

Water supply service chain

Solid waste management service chain

Wastewater management service chain

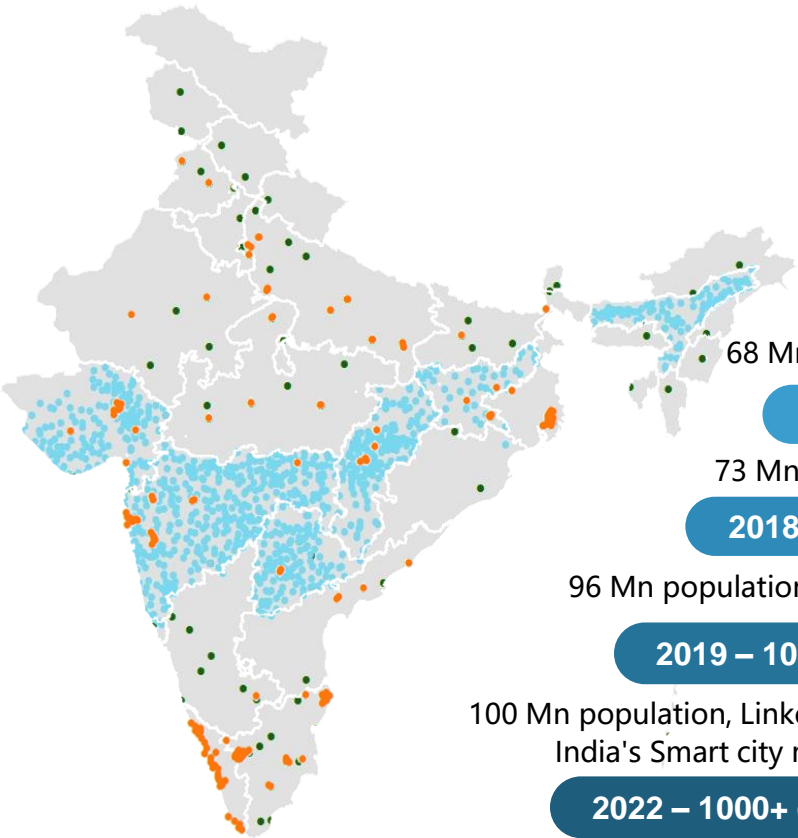

Urban Local Government

Cost recovery of water supply, wastewater and SWM services

Our journey from two states to National level....

2009 – 416 cities

68 Mn population, 2 states

2015 – 463 cities

73 Mn population

2018 – 900+ cities

96 Mn population, 6 states

2019 – 1000+ cities

100 Mn population, Linked with India's Smart city mission

2022 – 1000+ cities

Linked with City Finance Portal of Government of India

From paper based disaggregated data....

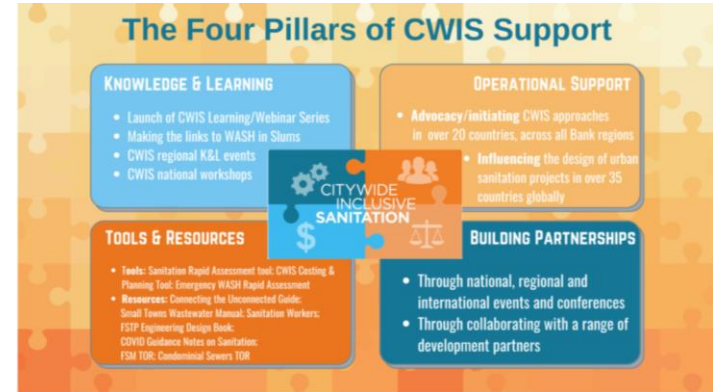

....to IT enabled information system

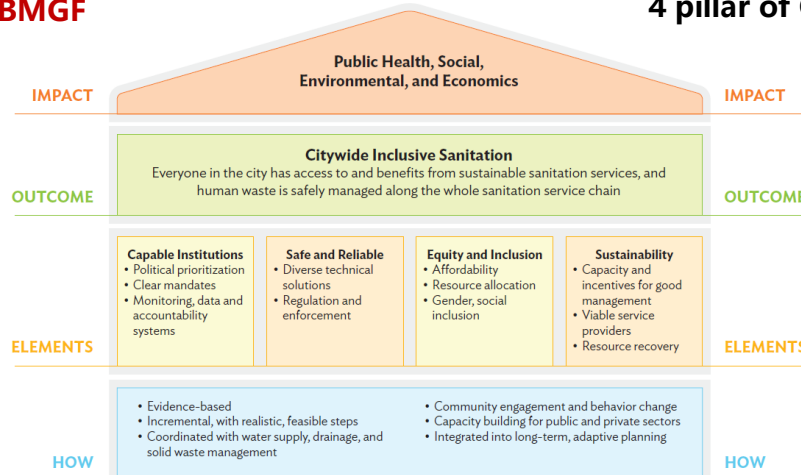

CWIS framework has been adapted by leading organizations

CWIS framework by **BMGF**

4 pillar of CWIS support by **World Bank**

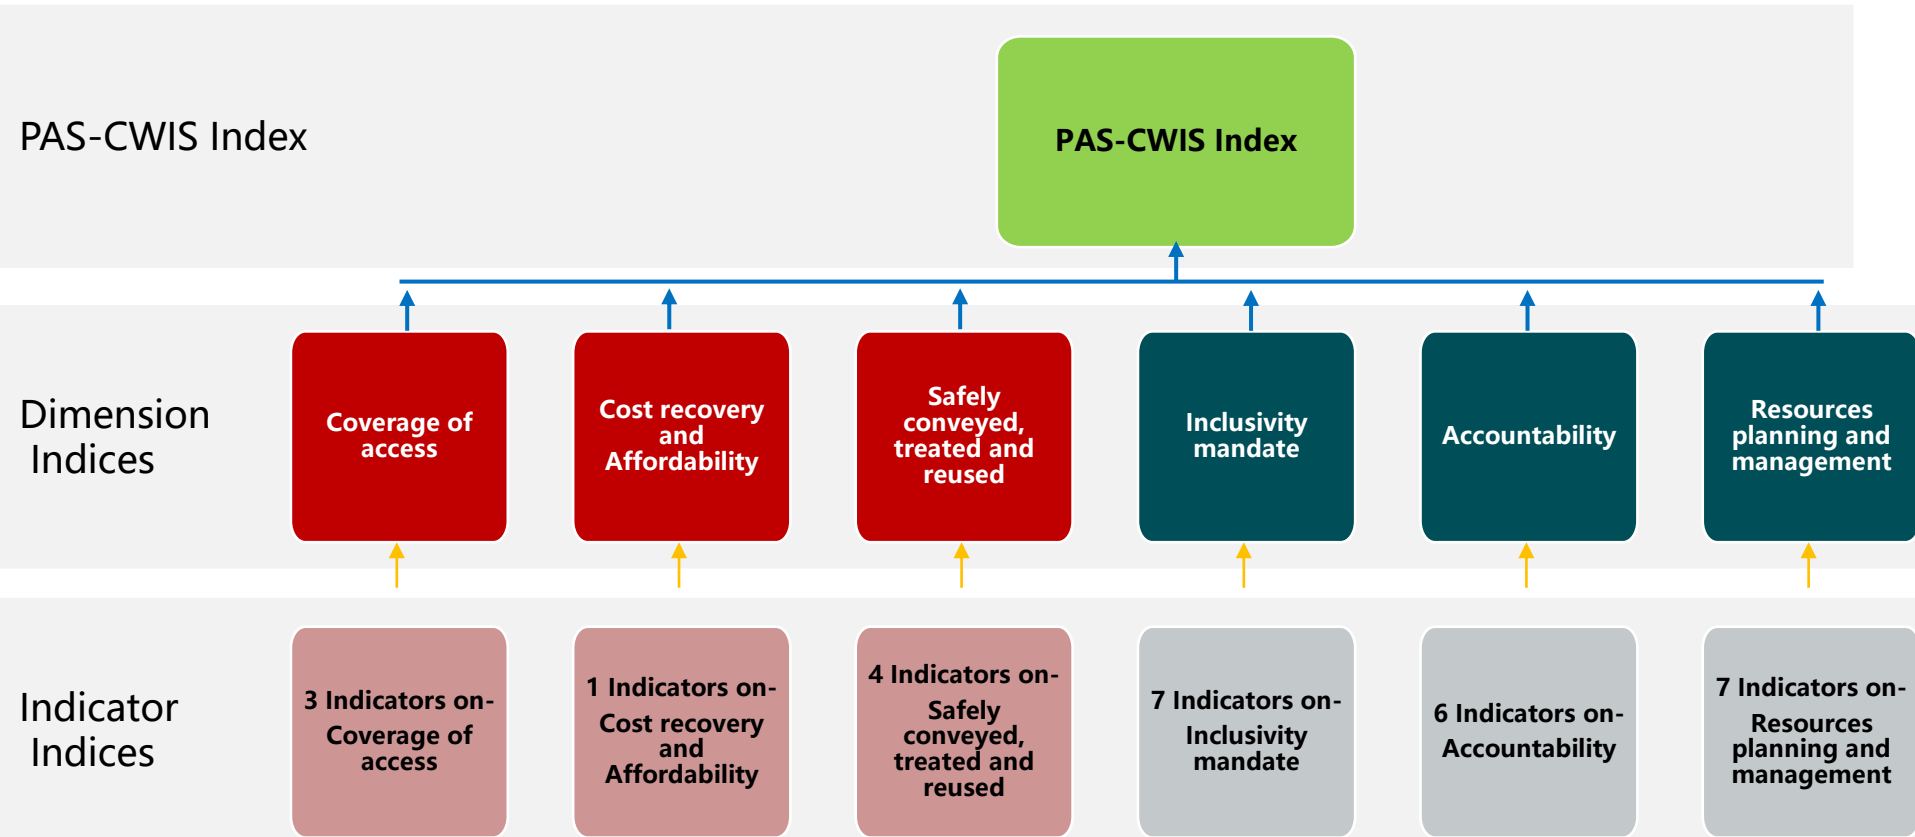

Citywide Inclusive Sanitation House by **ADB**

Convergence of PAS and BMGF-CWIS framework

Framework for PAS-CWIS Index

PAS-CWIS Performance Ladder designed to assess city performance

- Plotting cities performance in comparison to other cities - identify areas of improvement.

| | Performance | System Function | Service Outcome |
|----|--------------|--------------------|-------------------|
| Q1 | Achiever | >75% | >75% |
| Q2 | Front Runner | < or =75% and >50% | <or =75% and >50% |
| Q3 | Performer | <Or = 50% | <Or = 50% |
| Q4 | Aspirant | <50% | <50% |

City A has better performance in Service outcome than in System function

To become high performer city, City A need to improve Service outcome by 10% and System function by 50%

PAS information has led to data systems strengthening and performance improvement ...

Process Mapping of Water Supply and Sanitation at Local Level

E-governance Systems and SLB Integration

Water audits and drinking water quality surveillance

Information System Improvement Plans

With CWIS focus, PAS has the potential to become a tool towards scaling-up CWIS

- ODF plans
- Moving towards ODF++, WATER+
- Scheduled desludging plans

Aligning with government programs and priorities

Infrastructure programs

Convergence with Women and livelihoods

National Urban Livelihoods Mission
Ministry of Housing & Urban Poverty Alleviation

San Worker Safety

Sanitation monitoring

A wide range of users – Towards Data Driven Governance and achieving CWIS goals

GOVERNMENT AGENCIES

City/State governments, SFCs for policy making, assessments for improvement plans, reporting

FINANCIAL INSTITUTIONS

ADB, World Bank - information for project identification, selection and formulation

REGULATORS

CAG, State Technical Boards - To assess regulatory compliance

RESEARCHERS

Academicians, students of planning or technology colleges

CONSULTANTS

For consulting assignments in preparation of Vision documents, City Development Plans, City Sanitation Plans

What works...

1. **Not a 'project' but a 'programme'** to mainstream it in governments
2. **Work with all three tiers of Governments** to influence policies and implementation
3. **Linking reporting with intergovernmental grants** - Finance Commission recommendations of reporting SLBs, City Finance portal
4. **Framework suited to local context** - Focus on efficiency, equity and on-site sanitation
5. **Digital platform for self assessment** with inbuilt validation checks to measure the service delivery
6. **No Pilots.....operate at Scale** to make an impact - Started with 400+ cities in 2008-09 , now scaled up to 1200+ cities across India
7. One of the **largest open access time series database** for urban water and sanitation

UNIVERSITY

THANK YOU

About us

The Center for Water and Sanitation (CWAS) at CEPT University carries out various activities – action research, training, advocacy to enable state and local governments to improve delivery of services.
