

# Understanding Community Based Usage of Water and Sanitation in Informal Settlements in Bengaluru

Study Conducted for the

**Center for Urban and Regional Excellence, New Delhi**

Shreya Pillai

Independent Researcher

**Global South Academic Conclave on WASH and Climate 2025**

21st - 23rd February 2025, Ahmedabad

## The Client

- Center for Urban and Regional Excellence (CURE) is advising Urban Development Department (UDD), Government of India on basic infrastructure development as wholistic solutions and resilient communities, citywide slum upgrading and environmental resilience plans.

## The Project

- Develop an appreciative enquiry to citywide slum upgrading in Bengaluru with a focus on behavioral change, community engagement and participatory methods;
- Improving the quality-of-service provision in slums/ informal settlements in Bengaluru.
- Addressing climate change and the resilience discourse through an ethnographic/ gendered lens
- Understanding settlement development, community engagement, behavioral change, participatory processes, information and communication dissemination, gender, diversity and disabilities from a bottom- up approach.

# Methodology

## Literature Review-

analysis of papers on research, policy etc. on low-income settlements in Bengaluru on WASH interventions in the city

## Interviews

with key members of the nonprofit, activist, academic and government infrastructure in the city-through semi structured, open ended conversations

## Broad-brush Mapping

of slums/ informal settlements in Bengaluru.

## Understanding the Context

- Age, location and size of the settlements, types of community, infrastructure available and access to the community
- Clusters based on Mapping
- Partner (APSA) Locations

## Identification of Settlements

Over 25 consultations with women across informal settlements

## Community Consultations

*Note: this is not intended to be a comprehensive study but an observational study in selected low-income settlements where the team has connections with civil society organizations. Data collected has been quantified to the extent possible. Extrapolations are best estimates.*

# Narrative on Slums

## Ambiguity in Definitions

- Under *section 3 of the Slum Areas (Improvement and Clearance) Act, 1956* slums are:

*'areas where buildings are in any respect unfit for human habitation, by reason of dilapidation, overcrowding, faulty arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light, sanitation facilities or any combination of these factors which are detrimental to safety, health and morals'*

- **National Sample Survey Organization (NSSO)** considers a slum to consist of at least 20 households
- **Census of India 2011** sets the threshold at 60–70 households
- The official classification of slums includes:
  - **Notified Slums-** areas notified as slums by the municipality or urban local body
  - **Non-Notified Slums-** all other slums, not officially notified by the municipality or urban local body

## Ambiguity in Numbers of Slums in Bengaluru

- According to the Karnataka Slum Development Board (KSDB) 2011, there are 597 slums are located in Bengaluru.
- No slums have been notified since 2011.
- BBMP has another unofficial listing.

## Need for New Definitions

- The new poor are migrants to the city in the last 1-10 years and typically live in temporary settlements, near construction sites, or in tenements in peripheral areas of the city (*Roy Choudhury 2011*)
- A study (Krishna et al, Duke Univ. 2014 with Jana Urban Foundation) proposes a recategorization of **informal settlements** in Bengaluru:
  - **new migrant settlements,**
  - **very low-income settlements and**
  - **low-income settlements**

## (Very) Low-income Settlements

*Small/medium size shelter/ units and little space between houses, paved but narrow inner roads and some small brown roofs*

## Notified Slums

*compact area of at least 300 population or about 60–70 households of poorly built congested tenements, in unhygienic environment usually with inadequate infrastructure and lacking in proper sanitary and drinking water facilities'*

## Non-Notified Slums

*single story structures- blue tarpaulin covered mud shelters, tin and wooden sheds, concrete buildings. Access to water, electricity and sanitation is facilitated through makeshift means*

## New Migrant Settlements

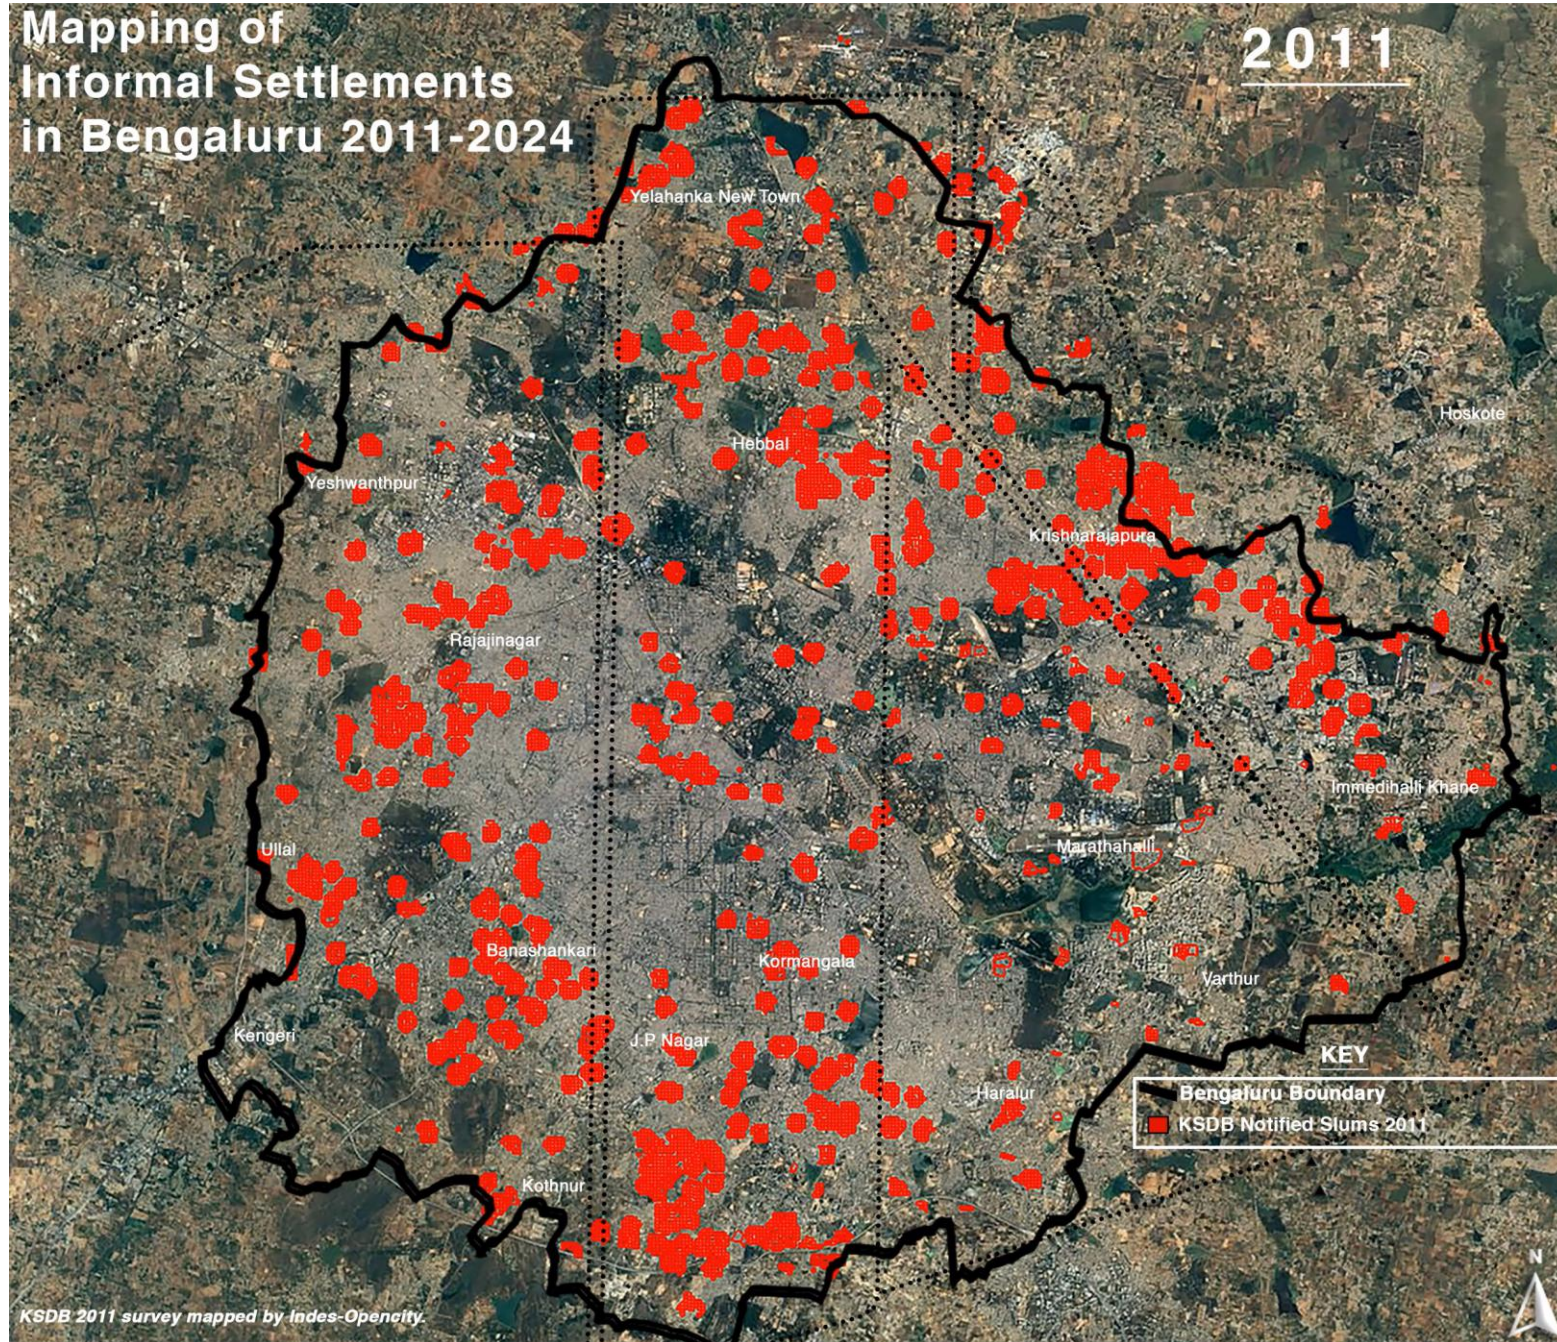

*temporary settlements, with roofs that generally consist of blue plastic sheeting (tarpaulins)*

# Mapping of Informal Settlements in Bengaluru 2011-2024

2011

**Notified Slum-  
Byrasandra, Jayanagar**

**Non-Notified Slum- ISRO  
Colony, Indiranagar**

**Migrant Population-  
Pai Layout**

**Low Income Settlement-  
Islampura**

40+ years

40+ years

20+ years

40-50 years

800 families

4-500 families

Pockets of 6-10 sheds

300 families

5 acres

2 acres

on the edge of a 28-acre  
settlement

65 acres

Jayanagar, South Bengaluru

Indiranagar, West Central  
Bengaluru

Mahadevapura/ Whitefield,  
West Bengaluru/ Periphery of  
the City

West Bengaluru

Government Land

Government Land

Private/ Agricultural

Private plot ownership

Older Kannadiga, Andhra and  
Tamil families (2-3  
generations); mostly  
scheduled caste

Older Tamil and Telegu  
families (2-4 generations);  
mostly scheduled caste

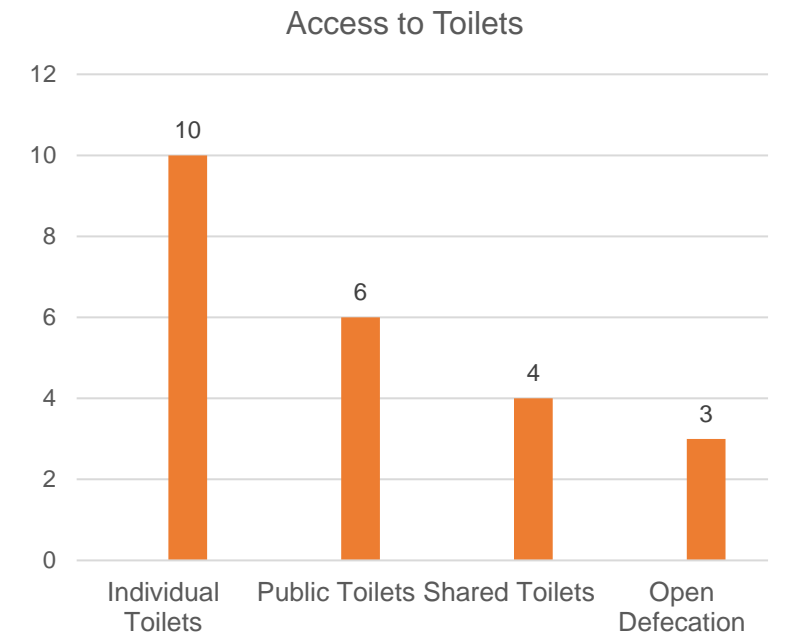

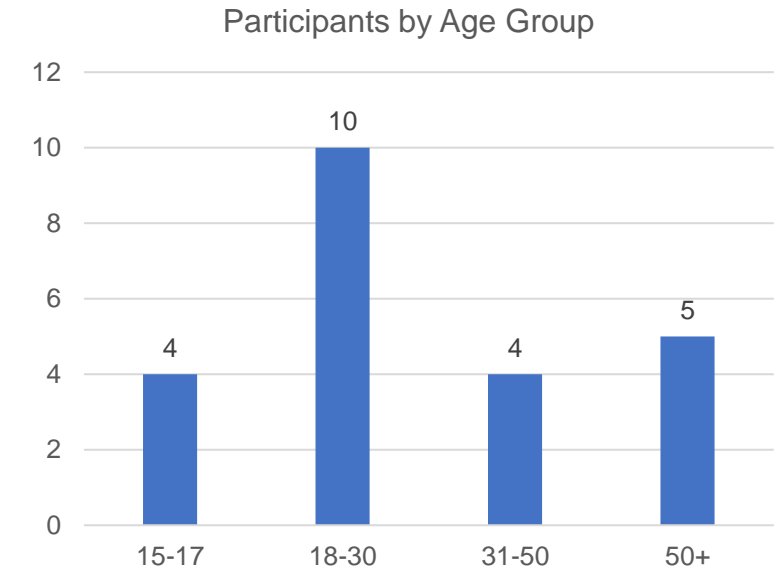

Older Kannadiga families  
from North Karnataka in blue  
tarp tents; recent migrants  
from north India and Nepal in  
chawls/ tenements

Muslim Kannadiga families;  
at least 3-4 generations

# Mapping and Community Consultations

Name of Settlement	Type of Settlement	No of people in consultation	Type of People
<b>Byrasandra, 3rd Block, Jayanagar</b> (in the Jayanagar cluster area)	Notified Slum	8	Women, home based workers, 1 woman with disabilities
<b>ISRO Colony Slum, Indiranagar</b>	Non-Notified Slum	2	Young women
<b>Pai Layout, Mahadevapura</b> (in the KR Puram/ Whitefield cluster area)	Temporary Migrant shelters in middle-income settlement	7	4 women from migrant (North Indian and Nepali) families; and 3 women from North Karnataka that have lived in the area for over 20 years
<b>Islampura, Vimanapura</b> (Minority- Muslim settlement)	(Very) Low-Income settlement	5	4 Muslim women and 1 Hindu woman

Home Ownership

# Where to live and what to live in

Location-  
proximity to  
work, schools  
and colleges

Connection to  
Settlement/  
Community

Tenure

Years Spent in Settlement

*Initial shelter- blue tarpaulin and tin shed construction*

*5-10 years-invest in pucca/ concrete one room unit*

*10+ years (plus tenure)-  
incrementally build multistorey multi family units with individual toilets*

*10+ Years-Stronger sense of rootedness-  
greater demand for services from BBMP*

# Observations- Inadequate WASH Infrastructure

*Only Four Public Toilets in ISRO Colony Slum for 4-500 families; two are closed due to poor lighting and lack of repair*

*Private Toilets in Byrasandra Slum-makeshift, under stairs, clogged, inadequate water supply; most have no bathing area*

*Inadequate storm water drainage causes flooding along the pathways whenever it rains*

- Many toilets are shared by neighbours in Islampura due to low water pressure.*
- No public or community toilets in Pai Layout; blue tarp families use school toilets, apartment toilets or resort to OD.*

*“People are good here but no one cares about the poor. There are no public toilets in the layout. We have to manage somehow. Our house gets flooded every time it rains. But we are not complaining” Savitriamma, Pai Layout*

# Observations- Poor Quality of WASH Infrastructure

*Water and Sanitation Pipelines are corroded-over a decade old and poorly managed*

*Sewerage lines regularly mix with water supply lines causing contamination and disease*

***lack of operation and maintenance of WASH infrastructure***

*Access to the Public Toilet in ISRO Colony slum is poorly lit and along a deeply polluted and flood prone rajkaluve*

# Observations- Poor Design of WASH Infrastructure

## *Poor-quality toilet design has adverse effects on Women, Elderly and Non-Binary Community*

- lack of gender sensitive design- doors, locks, roofs, and walls- causes stress and deterrence
- non-gender-segregated toilets results in harassment and violence
- poorly maintained facilities leads to disease
- Inappropriate locations for toilets

# Framework for Analysis- Integrated Behaviour Model (IBM- WASH)

Levels	Contextual Factors	Psychosocial Factors	Technology Factors
<b>Societal/ Structural</b>	Policy and Regulations, Climate and Geography	<b>Leadership/ Advocacy, cultural identity</b>	Manufacturing, financing, and distribution of product, current and past national policies and promotion of products
<b>Community</b>	Access to markets, access to resources, built and physical environment	Shared values, collective efficacy, social integration, stigma	<b>location, access, availability, individual vs collective ownership/ access, maintenance</b>
<b>Interpersonal/ Household</b>	<b>Roles and responsibilities, household structure, division of labour, available space</b>	<b>Injunctive norms, descriptive norms, aspirations, shame, nurture</b>	Sharing of access to product, modelling/ demonstration of use
<b>Individual</b>	<b>Wealth, age, education, gender, livelihoods/ employment</b>	Self-efficacy, knowledge, disgust, perceived threat	Perceived cost, value, convenience and other strengths/ weaknesses
<b>Habitual</b>	Favourable environment for habit formation, opportunity for removal of barriers	<b>existing water and sanitation habits, outcome expectations</b>	Ease/ Effectiveness of routine use of product

*Dreibelbis, R., Winch, P.J., Leontsini, E. et al. The Integrated Behavioural Model for Water, Sanitation, and Hygiene: a systematic review of behavioural models and a framework for designing and evaluating behaviour change interventions in infrastructure-restricted settings.*

# Impact on Society

## ***Adverse Economic impacts on individuals and households***

- Most of the women interviewed have barely pursued an education and find it difficult to find jobs

## ***Poor Health Impacts on women and children***

- Most of the women were caretakers of younger children when young; married off early and became young mothers
- Despite Covid, most women have little access to soap; face taboos against drying menstrual cloth in public.
- During their periods, women in the settlements bathe less
- Improper storage of water leads to contamination and disease

## ***Psychosocial Stresses and Gender based harassment***

- Most of the women and young women bathe early in the morning, fast, are always tense; they control diets (esp. at night) and bathe with clothes on, to avoid shame and prying eyes.
- The women interviewed reported feeling shame, fear, embarrassment when defecating outside

# Water and Sanitation, Community, and Power

*Women of Byrasandra have coalesced around their scheduled class and gender identity*

Identity Driven

*The Tamil community of ISRO colony have a cohesive representation in the local governance mechanism despite being non notified*

*Most of the very low-income/ migrant shelters in Pai Layout are women headed and have no access to governance*

Gender Driven

Religion / Caste Driven

*Older minority community of Islampura have a cohesive representation in the local governance mechanism*

**Demand Services from BBMP/  
BWSSB**

# Climate Change, Gender and WASH

## Erratic/Severe weather related crises

non notified slum of ISRO Colony floods due to the storm water drain; Pai Layout, Islampura and Byrasandra all ***flood in the rains***

## Disease

lack of sanitation facilities, poor water supply and storage- leading to ***disease*** and affecting ***reproductive health***

## Increased Heat Impact

the last two years, in the ***extreme heat of the summer***, water supply is drastically reduced resulting in ***demand for tankers; lack of ventilation and tin roofs*** increased ***heat impact*** in houses

# Conclusions

<p><u><i>Inequity in Access to Power and Bureaucracy</i></u></p> <p><b>Community relationships</b> in all the settlements with the local bureaucracy defines <b>quality of the facilitation</b> of WASH services</p>	<p><u><i>Caste, religion, class and gender gap</i></u></p> <p>Power discrepancy between <b>typically upper caste government engineers and lower caste slum residents</b>; all site engineers and meter readers are men</p>	<p><u>Discriminations based on Language and Paperwork</u></p> <p><b>Opaque and overwhelming paperwork</b> (often in English); residents <b>run from pillar to post for basic services</b></p>	<p><u><i>Insecure ownership, tenure and investment in the future</i></u></p> <p><b>Insecure conditions stymie access to basic services</b>; accessing <b>tenure ship documents</b> is a long and complicated process</p>	<p><u><i>Poor Quality of infrastructure, maintenance and service provision</i></u></p> <p>Pipelines are corroded, old and poorly managed; problem solving is inconsistent, <b>over engineered, rarely ecological or low cost</b> and usually transferred back to be borne by community</p>	<p><u><i>Grievance Redressal</i></u></p> <p><b>Opaque and unwieldy</b>, especially at the local level; women have little say</p>	<p><u><i>Public Participation</i></u></p> <p><b>Strong Community Participation</b> but acknowledgement and response by <b>municipality is tokenistic</b></p>	<p><u><i>Performance benchmarks</i></u></p> <p><b>Overly quantitative</b>, techno bureaucratic and top down</p>
