

SDG AND SOUTH ASIA URBANISATION

Dinesh Mehta

Presentation at the South Asia Urban Forum
Colombo, 22 September 2015

SUSTAINABLE DEVELOPMENT GOALS

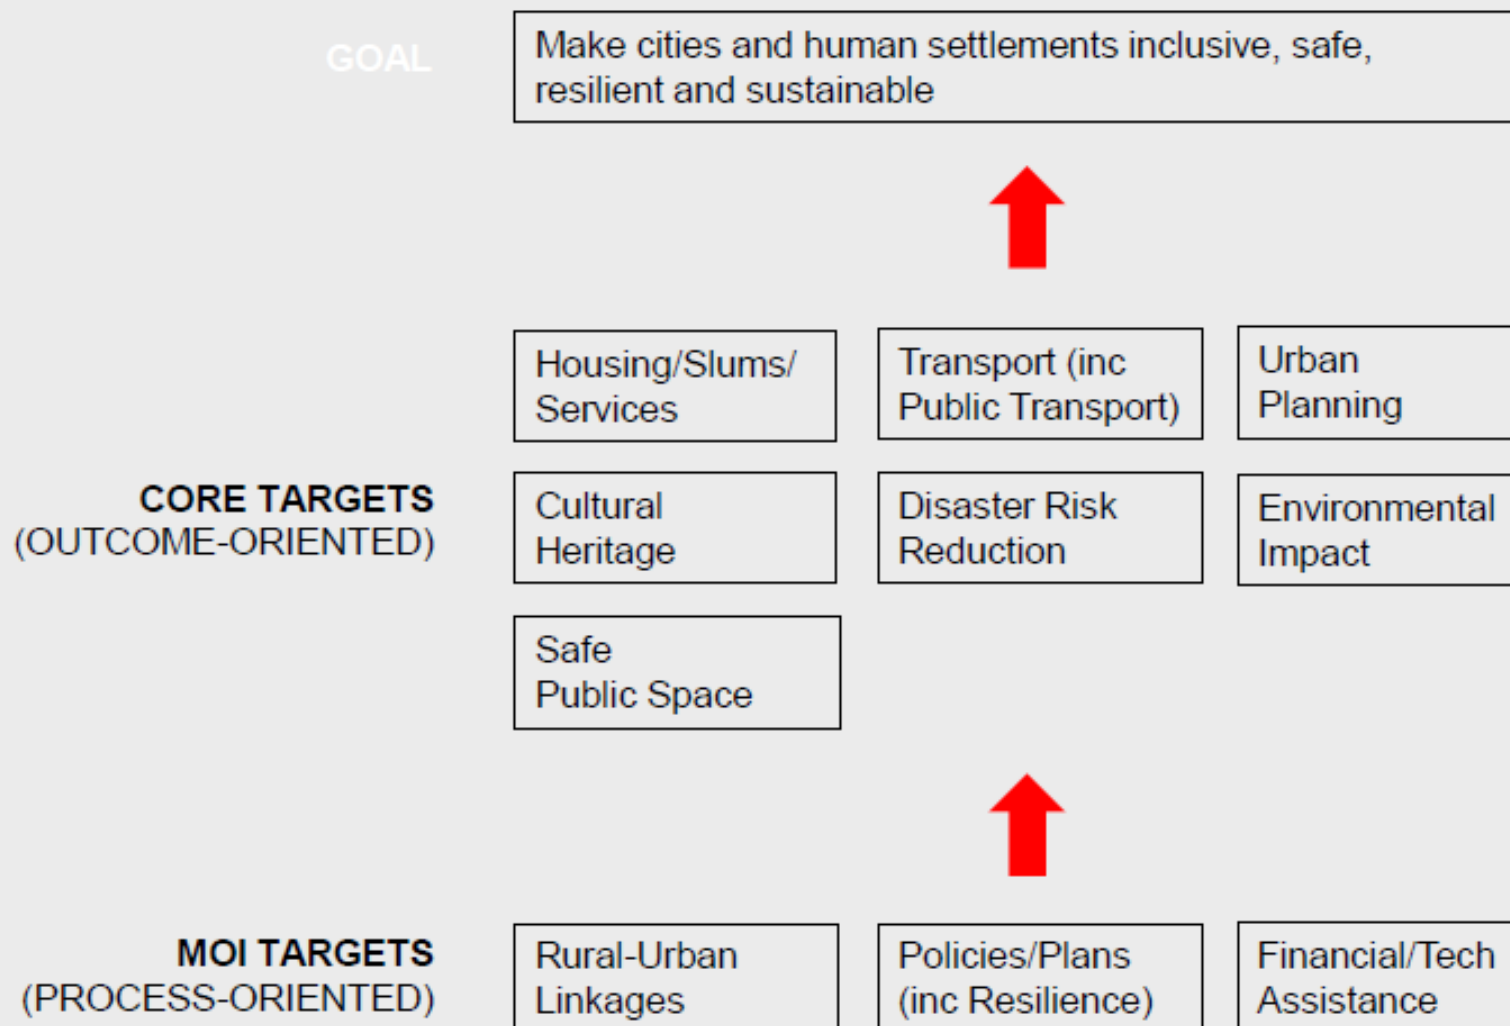

Goal 11. Make cities and human settlements inclusive, safe, resilient and sustainable

- 11.1 By 2030, ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums
- 11.2 By 2030, provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons
- 11.3 By 2030, enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries
- 11.4 Strengthen efforts to protect and safeguard the world's cultural and natural heritage
- 11.5 By 2030, significantly reduce the number of deaths and the number of people affected and substantially decrease the direct economic losses relative to global gross domestic product caused by disasters, including water-related disasters, with a focus on protecting the poor and people in vulnerable situations

- 11.6 By 2030, reduce the adverse per capita environmental impact of cities, including by paying special attention to air quality and municipal and other waste management
- 11.7 By 2030, provide universal access to safe, inclusive and accessible, green and public spaces, in particular for women and children, older persons and persons with disabilities
- 11.a Support positive economic, social and environmental links between urban, peri-urban and rural areas by strengthening national and regional development planning
- 11.b By 2020, substantially increase the number of cities and human settlements adopting and implementing integrated policies and plans towards inclusion, resource efficiency, mitigation and adaptation to climate change, resilience to disasters, and develop and implement, in line with the Sendai Framework for Disaster Risk Reduction 2015-2030, holistic disaster risk management at all levels
- 11.c Support least developed countries, including through financial and technical assistance, in building sustainable and resilient buildings utilizing local materials

Mapping of Goal 11 Targets

4 PS OF PLANNING

People

Places

Prosperity

Poverty

World is more urban now!!

Urban and rural population of the world, 1950–2050

Every second, the urban population grows by **2 people**

5 million city residents are joining the urban population in the developing world each month

27 % of the urban population in the developing world does not have piped water in its house

827.6 million people live in slums, often lacking adequate drinking water and sanitation

250 to 500 m³ of drinking water leaks from the supply systems in many mega cities each year

The poor pay more
A slum dweller in Nairobi pays **5 to 7 times** more for a litre of water than an average North American citizen

493 million people in cities share their sanitation facilities. In 1990 this number was 259 million.

In Africa and Asia the urban population will double between 2000 and 2030

One of four city residents worldwide, **794 million** in total, lives without access to improved sanitation facilities

95 % of the urban population growth in the next decades will take place in the developing world

A lack of safe water and sanitation in cities leads to cholera, malaria and diarrhoea

Figure 8.

Global urban population growth is propelled by the growth of cities of all sizes

Urban Asia

Urbanization

Percentage of population living in cities in 2010

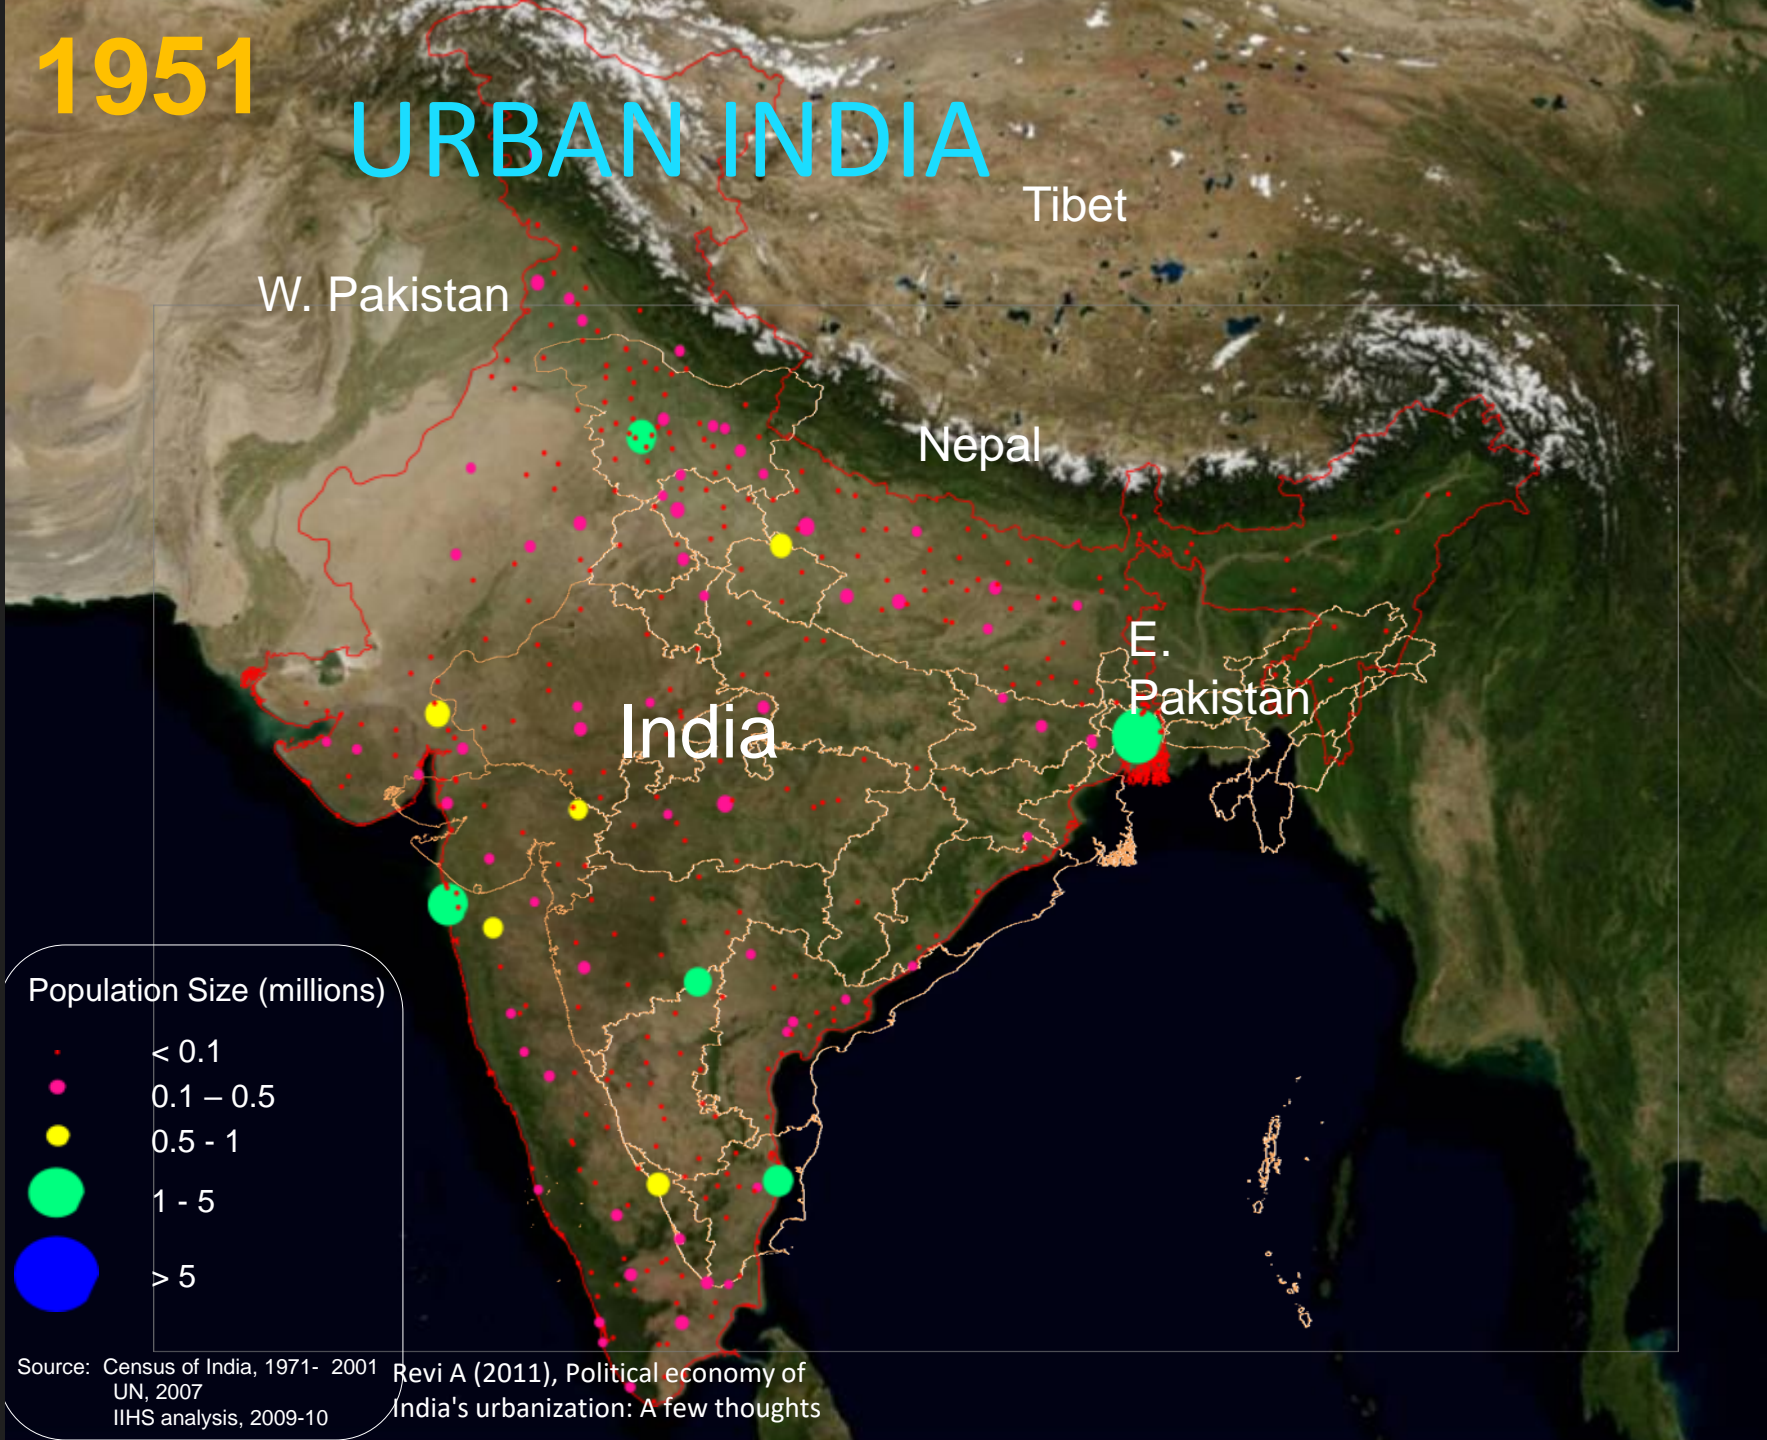

KEY

About 40% of Asia's population now lives in cities, compared with 70% in Europe, North America, and Latin America, but the coming decades are expected to bring rapid increases in urbanization. By 2050, with the urbanization of more than two-thirds of the People's Republic of China's population and more than half of India's, Asia's cities are predicted to be home to more than 60% of the world's urban dwellers.

WHAT IS URBAN?

Box 1.1 Definitions of urbanization in South Asia

Within South Asia each country has its own criteria to classify an area as urban. India uses a broad-based definition involving both statutory (administrative) and census classification. Nepal also uses a definition comprising various demographic and economic characteristics. Pakistan and Sri Lanka have a restrictive definition based only on an administrative criterion to define a settlement as urban.

India: Urban areas include towns (places with a municipality, corporation, cantonment board or notified town area committee). Additionally, an area can also be classified as urban if it fulfils the following criteria: a minimum population of 5,000, a density of population of at least 400 per

square kilometre (1,000 per square mile), and at least 75 per cent of the male working population engaged in the non-agricultural sector.

Pakistan: Areas with a municipal corporation, a town committee or a cantonment board are classified as urban.

Bangladesh: Places with a municipality (*pourashava*), a town (*shahar*) committee or a cantonment board are classified as urban. In general, urban areas should have at least 5,000 persons in a continuous collection of houses where the community maintains public utilities, such as roads, street lighting, water supply, sanitary arrangements, etc. Urban areas are generally

centres of trade and commerce with a majority of the population engaged in non-agricultural activities. An area that has urban characteristics but has fewer than 5,000 inhabitants may, in special cases, be considered urban.

Nepal: Urban areas should have a minimum of 20,000 inhabitants, annual revenue of NPR500,000 and minimum urban facilities such as electricity, roads, drinking water and communication services. For hilly areas, the definition is relaxed to a minimum of 10,000 inhabitants.

Sri Lanka: Urban areas include municipalities and settlements with an urban council.

LEARNING FROM ASIAN CITIES

SEOUL TRANSFORMATION

GREEN DREAMS

Seoul once symbolized everything bad about the urban concrete jungle. Now, driven by an activist mayor, the city is creating green oases in its center. Can other Asian metropolises, like smog-plagued Hong Kong, learn from Seoul's example? ▶

SDG GOAL 11

- Urban planners have an important role to play in meeting the SDG goals
- Each country will have its own agenda; and planners will have to adopt planning practices towards meeting the goal 11
- Cities in Asia have demonstrated progress on making cities productive, inclusive and sustainable. We can learn from them.
