Dr Rohit Yadav
Special Secretary, UAD
Chhattisgarh

Foreword

In 2009, the Ministry of Urban Development (MoUD), Government of India initiated the process of service level benchmarks (SLB) for basic urban services to ensure performance based accountability and optimal utilisation of infrastructure investments. The Thirteenth Central Finance Commission and the Fourteenth Central Finance Commission have included publication of service level benchmarks as one of the conditions to avail performance grants. The department of Urban Administration and Development (UAD), Government of Chhattisgarh has formalised publication of SLBs for all the urban local bodies of Chhattisgarh.

Information published in this data book is from the data collected for SLB Gazette publications on Service Level Benchmarks under Fourteenth Central Finance Commission. SLB data collection and analysis has been done through online SLB-PAS module developed by CEPT University. This data book covers information of 168 urban municipal bodies that have notified their service levels.

The Government of India has launched "Swachh Bharat Abhiyan", with a target to have clean cities by the year 2019. Information contained in this data book is very useful to monitor progress of various government programmes like AMRUT and Swachh Bharat Mission at local and State level. Using this data book, cities can identify the quantum of work required to make their cities clean and monitor progress using the framework of Service Level Benchmarks.

Under the guidance of Chief Minister Dr Raman Singh and Urban Administration Minister Sri Amar Agrawal, many new initiatives to improve quality of life in urban areas are being launched. The Service Level Benchmarks provide a good measure of cities' performance related to various goals and programmes of the central and state governments. It will be our collective endeavour to ensure that we use this publication to plan and monitor urban service delivery in urban Chhattisgarh.

December, 2016

Dr Rohit Yadav
Special Secretary, UAD, Chhattisgarh

Niranjn Das, IAS
Director, UAD
Chhattisgarh

Preface

This publication "Performance Assessment Report for Urban Water and Sanitation Sector (2015-16)", presents the service level information of 168 urban local bodies (ULBs) in Chhattisgarh for the core urban services of water supply, sewerage/sanitation, solid waste management and storm water drainage. The department of Urban Administration and Development (UAD), Government of Chhattisgarh was supported by CEPT University, Ahmedabad through the Performance Assessment System (PAS) project, in carrying out this endeavour.

I would like to record my appreciation for CEPT University for building capacity of Urban Local Bodies in Chhattisgarh to use the online SLB-PAS module. The CEPT University team also provided support to ULBs on data collection, validation and generating city level SLB indicators for gazette publication. They have also prepared this publication which can be used as a ready reference material by the state and ULB officials.

I would like to acknowledge and thank the officers of UAD particularly, Shri Sanjeev Beohar (Superintending Engineer, Urban Development Department), Shri. Nilambar Nayak (Joint Director, Bastar division), Shri. Ashok Chandrakar (Joint Director, Durg division), Shri. P.B. Kashi (Joint Director, Raipur division), Shri. Rajendra Dohare (Joint Director, Bilaspur division) and Shri T.S. Sarthi (Joint Director, Sarguja division) for their support in this work. In addition, I would like to thank all the Municipal Commissioners / Chief Officers of urban local bodies and their staff for their cooperation in providing the information. The significant contribution and involvement of municipal commissioners / chief officers, mayors, chairpersons and elected representatives of the local bodies in the state has been highly motivating.

Overview of SLB Initiative

Introduction

“Measuring service levels of civic agencies implies measuring outcomes, and indirectly also reflects on institutional capacity, financial performance and other parameters. Service level parameters can be measured either from a utility manager’s/planner’s perspective or from a citizen’s or consumer’s perspective. In addition, to facilitate comparison between cities, and to assess changes in performance over time, it is important that the performance levels are benchmarked, and monitored” (MoUD, Handbook on Service Level Benchmarks, 2008).

It was in this context, that the Ministry of Urban Development (MoUD) had initiated an exercise to assess Service Level Benchmarks (SLBs). Such benchmarks and monitoring have helped ULBs, State Governments and National government to monitor outcomes of their investments in water and sanitation in the past years. When such monitoring systems are institutionalized, it would also help monitor new programmes, such as the “Swachh Bharat Abhiyan”, that has a target to have clean cities by the year 2019. Sustained benchmarking can help utilities to identify performance gaps and introduce improvements through the sharing of information and best practices, ultimately resulting in better services to people.

The benchmarking process does not stop at the stage of reporting. It was envisaged that cities will develop Information System Improvement Plans (ISIP) and Performance Improvement Plans (PIP). A PIP identifies the performance gaps and identifies key action areas that would lead to performance improvement. An ISIP is to make the process of information collection more reliable and robust. . At present, the reliability level of many SLB indicators is low. However, some cities have prepared their ISIP and have begun implementation.

Definition of SLB indicators

The Handbook of Service Level Benchmarking identifies 28 performance indicators under water supply, wastewater management, solid waste management and storm water drainage sectors. The following tables give sector-wise list of the indicators and the respective definitions.

Water Supply Indicators:

| SL. No. | SLB Indicator | Benchmark | Definition |
|---------|---|-----------|--|
| 1 | Coverage of water supply connections | 100% | Total number of households in the service area that are connected to the water supply network with direct service connections, as a percentage of the total number of households in that service area. Service area implies a specific jurisdiction in which service is required to be provided. |
| 2 | Per capita supply of water | 135 lpcd | Total water supplied to consumers expressed by population served per day. |
| 3 | Extent of metering of water connections | 100% | The total number of functional metered water connections expressed as a percentage of the total number of water supply connections. Public stand-post connections should also be included. |
| 4 | Extent of non-revenue water (NRW) | 20% | This indicator highlights the extent of water produced which does not earn the utility any revenue. This is computed as the difference between the total water produced (ex-treatment plant) and the total water sold expressed as a percentage of the total water produced. NRW comprises: a) Consumption which is authorised but not billed, such as public stand-posts; b) Apparent losses such as illegal water connections, water theft and metering inaccuracies; and c) Real losses which are leakages in the transmission and distribution networks. |

| | | | |
|---|--|----------|---|
| 5 | Continuity of water supply | 24 hours | Continuity of supply is measured as the average number of hours of pressurised water supply per day. Water pressure should be equal to or more than a head of 7 meter (m) at the ferrule point/ meter point for the connection (7 m head corresponds to the ability to supply to a single-storey building). |
| 6 | Quality of water supplied | 100% | The percentage of water samples that meet or exceed the specified potable water standards, as defined by the Central Public Health and Environmental Engineering Organisation (CPHEEO). The sampling regimen should meet standards and norms laid down. |
| 7 | Efficiency in redressal of customer complaints | 80% | The total number of water supply-related complaints redressed within 24 hours of receipt of complaint, as a percentage of the total number of water supply- related complaints received in the given time period. |
| 8 | Cost recovery in water supply services | 100% | The total operating revenues expressed as a percentage of the total operating expenses incurred in the corresponding time period. Only income and expenditure of the revenue account must be considered, and income and expenditure from the capital account should be excluded. |
| 9 | Efficiency in collection of water supply-related charges | 90% | Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period |

Sewerage Management Indicators:

| SL. No. | SLB Indicator | Benchmark | Definition |
|---------|---|-----------|--|
| 1 | Coverage of toilets | 100% | This indicator denotes the extent to which citizens have access to a toilet (whether individual or community) in a service area. The toilets would include those in the category of residential, commercial, industrial and institutional properties. The service area implies a specific jurisdiction in which the service is required to be provided. |
| 2 | Coverage of sewage network services | 100% | This indicator denotes the extent to which the underground sewerage (or sewage collection network) has reached out to individual properties across the service area. Properties include those in the categories of residential, commercial, industrial and institutional. The service area implies a specific jurisdiction in which service is required to be provided. |
| 3 | Collection efficiency of the sewage network | 100% | This indicator is measured as the quantum of wastewater collected as a percentage of normative sewage generation in the ULB. Wastewater generation is linked to the quantum of water supplied through piped systems, and other sources such as bore wells, when they are very extensively used. |
| 4 | Adequacy of sewage treatment capacity | 100% | Adequacy is expressed as secondary treatment (that is, removing oxygen demand as well as solids, normally biological) capacity available as a percentage of normative wastewater generation, for the same time period |
| 5 | Quality of sewage treatment | 100% | Quality of treatment is measured as a percentage of wastewater samples that pass the specified secondary treatment standards, that is, treated water samples from the outlet of STPs are equal to or better than the standards laid down by the Government of India agencies for secondary treatment of sewage. While the samples are collected at the STP outlet and results should be computed per STP, this indicator should be reported at city/ULB level. |

| | | | |
|---|--|------|---|
| 6 | Extent of reuse and recycling of sewage | 20% | The percentage of wastewater received at the treatment plant that is recycled or reused after appropriate treatment for various purposes. This should only consider water that is directly conveyed for recycling or reuse, such as use in gardens and parks, use for irrigation, etc. Water that is discharged into water bodies, which is subsequently used for a variety of purposes, should not be included in this quantum. |
| 7 | Efficiency in redressal of customer complaints | 80% | The total number of sewage-related complaints redressed within 24 hours of receipt of complaints, as a percentage of the total number of sewage-related complaints received in the given time period. |
| 8 | Extent of cost recovery in sewage management | 100% | The extent of cost recovery is expressed as wastewater revenues as a percentage of wastewater expenses, for the corresponding time period. |
| 9 | Efficiency in collection of sewage charges | 90% | Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period. |

Solid Waste Management Indicators:

| SL. No. | SLB Indicator | Benchmark | Definition |
|---------|--|-----------|--|
| 1 | Household level coverage of SWM services | 100% | Percentage of households and establishments that are covered by a daily doorstep collection system. |
| 2 | Efficiency of collection of municipal solid waste | 100% | The total waste collected by the ULB and authorized service providers versus the total waste generated within the ULB, excluding recycling or processing at the generation point. (Typically, some amount of waste generated is either recycled or reused by the citizens themselves. This quantity is excluded from the total quantity generated, as reliable estimates will not be available for these). |
| 3 | Extent of segregation of municipal solid waste | 100% | Percentage of waste from households and establishments that is segregated. Segregation should at least be at the level of separation of wet and dry waste at the source. Ideally, separation should be in the following categories: biodegradable, non-biodegradable and hazardous waste. It is important that waste segregated at the source is transported through the entire chain in a segregated manner. Hence the indicator is based on measurement of waste arriving in a segregated manner at the treatment/disposal site, rather than at the collection point. |
| 4 | Extent of municipal solid waste recovered | 80% | This is an indication of the quantum of waste collected, which is either recycled or processed. This is expressed in terms of percentage of waste collected. |
| 5 | Extent of scientific disposal of municipal solid waste | 100% | The amount of waste that is disposed in landfills that have been designed, built, operated and maintained as per standards laid down by Central agencies. This extent of compliance should be expressed as a percentage of the total quantum of waste disposed at landfill sites, including open dump sites. |
| 6 | Efficiency in redressal of customer complaints | 80% | The total number of SWM-related complaints redressed within 24 hours of receipt of the complaint, as a percentage of the total number of SWM-related complaints received in the given time period. |
| 7 | Extent of cost recovery in SWM services | 100% | This indicator denotes the extent to which the ULB is able to recover all operating expenses relating to SWM services from operating revenues of sources related exclusively to SWM. It is defined as the total annual operating revenues from SWM as a percentage of the total annual operating expenses on SWM. |

| | | | |
|---|---|-----|---|
| 8 | Efficiency in collection of SWM charges | 90% | Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period. |
|---|---|-----|---|

Storm Water Management Indicators:

| SL. No. | SLB Indicator | Benchmark | Definition |
|---------|--|-----------|---|
| 1 | Coverage of storm water drainage network | 100% | Coverage is defined in terms of the percentage of road length covered by the storm water drainage network |
| 2 | Incidence of water logging/flooding | 0 | The number of times water logging is reported in a year, at flood prone points within the city. |

Equity Related Indicators:

In addition to the indicators defined by MoUD in the SLB framework, PAS Project has made efforts to develop indicators to capture equity concerns in its Performance Measurement Framework. These are defined as below:

| SL. No. | SLB Indicator | Benchmark | Definition |
|---------|---|-----------|---|
| 1 | Coverage of water supply connections in 'slum settlements' | 100% | Total households in slum settlements connected to water supply network with a private (not shared) service connection, as percentage of total households in all slum settlements in the ULB |
| 2 | Coverage of household connections to sewerage network in 'slum settlements' | | Total number of slum households connected to sewerage network as a percentage of total number of slum households |
| 3 | Coverage of individual toilets in 'slum settlements' | 100% | Total number of slum households with individual toilets as a percentage of total number of slum households |
| 4 | Household level coverage of SWM services in 'slum settlements' | 100% | Total households in slum settlements serviced by door-to-door collection of MSW as a percentage of total number of households in slums. |

Way forward

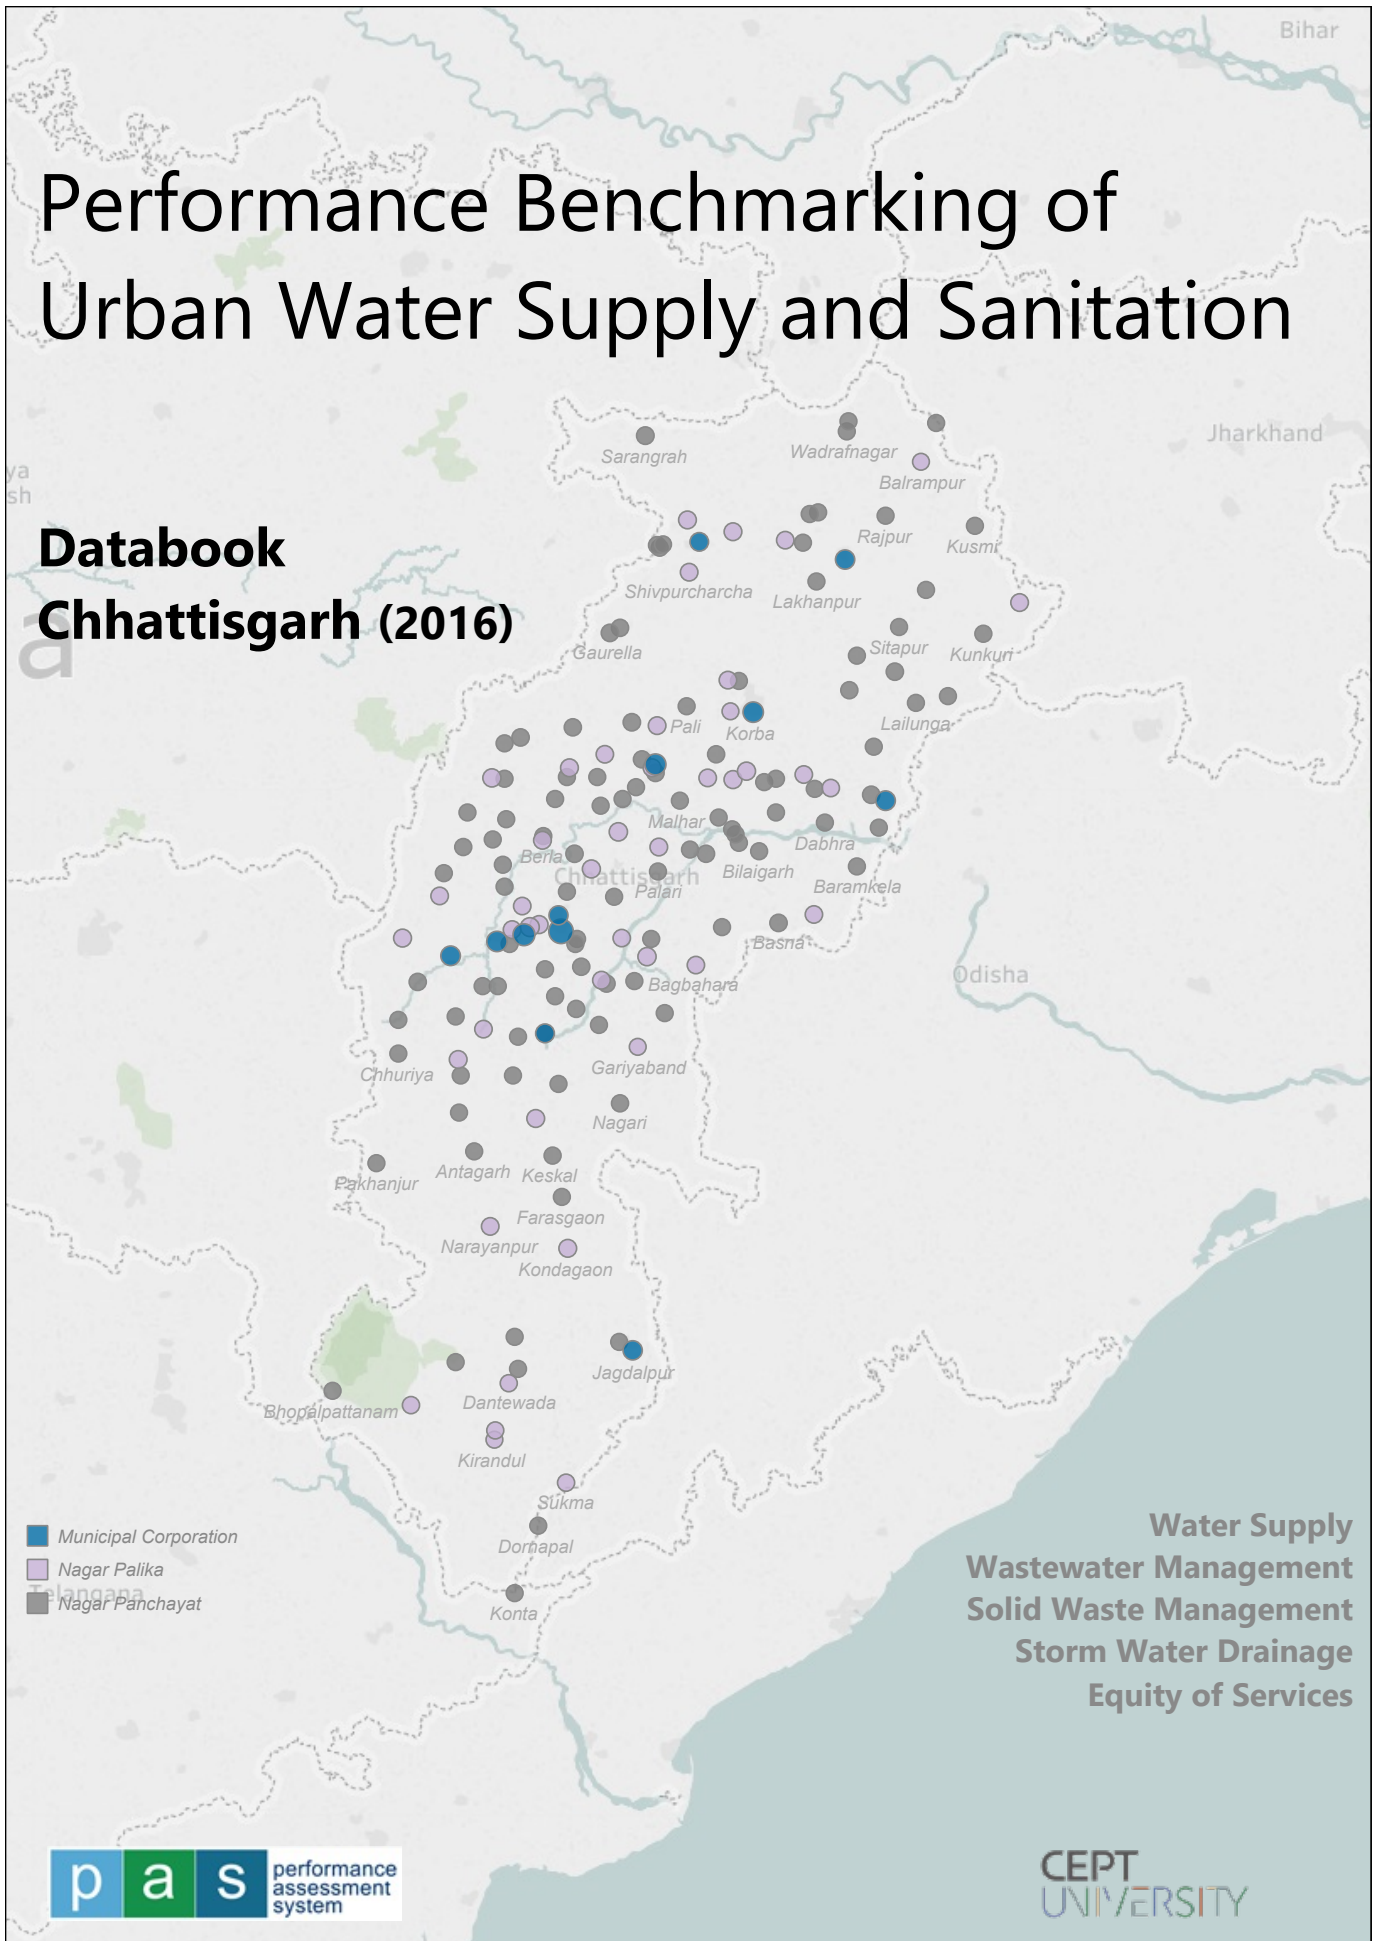

The SLB process is gradually being institutionalized at the State level. With availability of on-line portals, it has become easier for ULBs to report the SLBs and monitor their progress over time. As envisaged earlier, the focus of effort now has to be on improving the reliability of data and on improving performance. Towards this end, various tools are available for ULBs to prepare sustainable and affordable action plans.

It is expected that over the coming years ULBs and State governments will use this databook and available online information to:

1. Track Service level delivery of cities
2. Compare performance of ULBs with peers
3. Improve ULB Accountability among consumers
4. Identify areas for improvement
5. Use SLB for investment planning

Performance Benchmarking of Urban Water Supply and Sanitation

|--|---------|---------|-------------|------------|--------|------|
| Coverage of Storm Water Drainage Network | 131 | 0 | 31 | 168 | 13 | 0 |
| Incidence of water logging/flooding | 250 | 0 | 2 | 168 | 0 | 0 |

State Level Performance in Urban Water and Sanitation: 2016

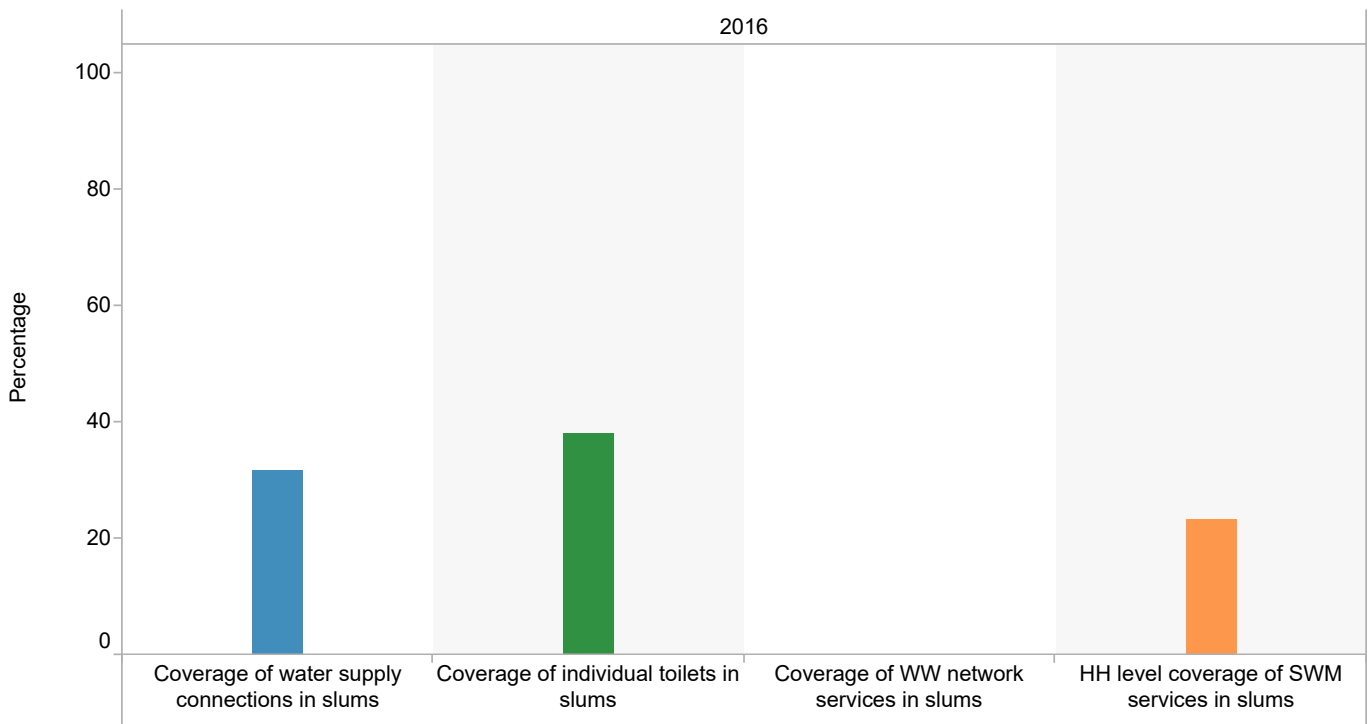

Access and Coverage

Coverage related indicators are measured at the smallest unit of a household (HH). For water and sanitation, the indicator measures households served by individual connection/ toilets, and for SWM, it measures households served by door to door collection of MSW.

Equity in Service Delivery

Equity in Service Delivery captures the variations in services provided within a city, across all sectors. Moreover, it measures the variations between poor and non-poor sections of the city.

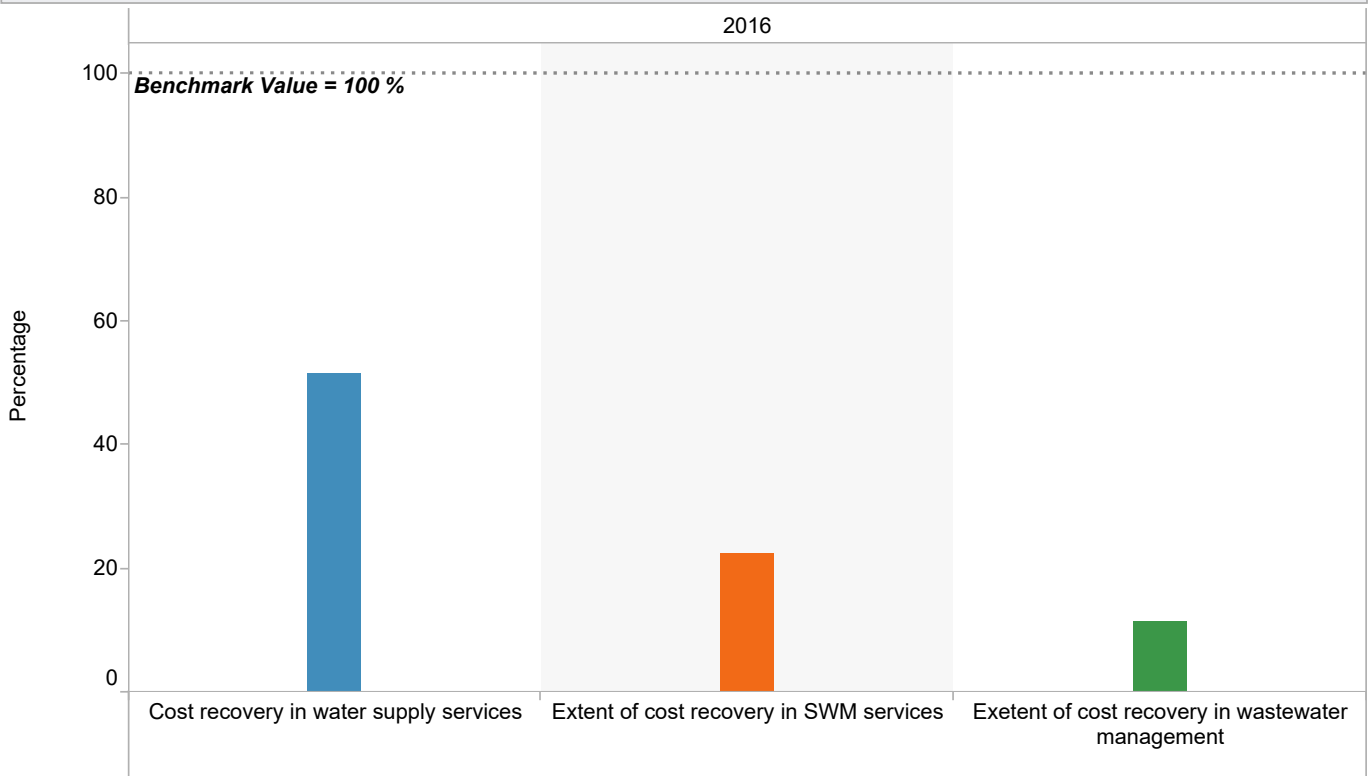

State Level Performance in Urban Water and Sanitation: 2016

Financial Sustainability

Financial sustainability is measured based on the extent of O&M cost recovery in each sector; recovery through local charges and taxes. Another important aspect of financial sustainability is determined by the collection efficiency of service charges for all the sectors.

Extent of Cost Recovery

Efficiency of Collection of Service Charges

State Profile

Water Supply

Drinking Water Supply: 2015-16

State Level Performance in Water Supply Services: 2016

Coverage of water supply connections at HH level (%)

Total households connected to the water supply network with a private (not shared) service connection, as percentage of total households in the ULB.

Coverage of water supply connections in 'slum settlements' (%)

Total households in slum settlements connected to water supply network with a private (not shared) service connection, as percentage of total households in all slum settlements in the ULB.

State Level Performance in Water Supply Services: 2016

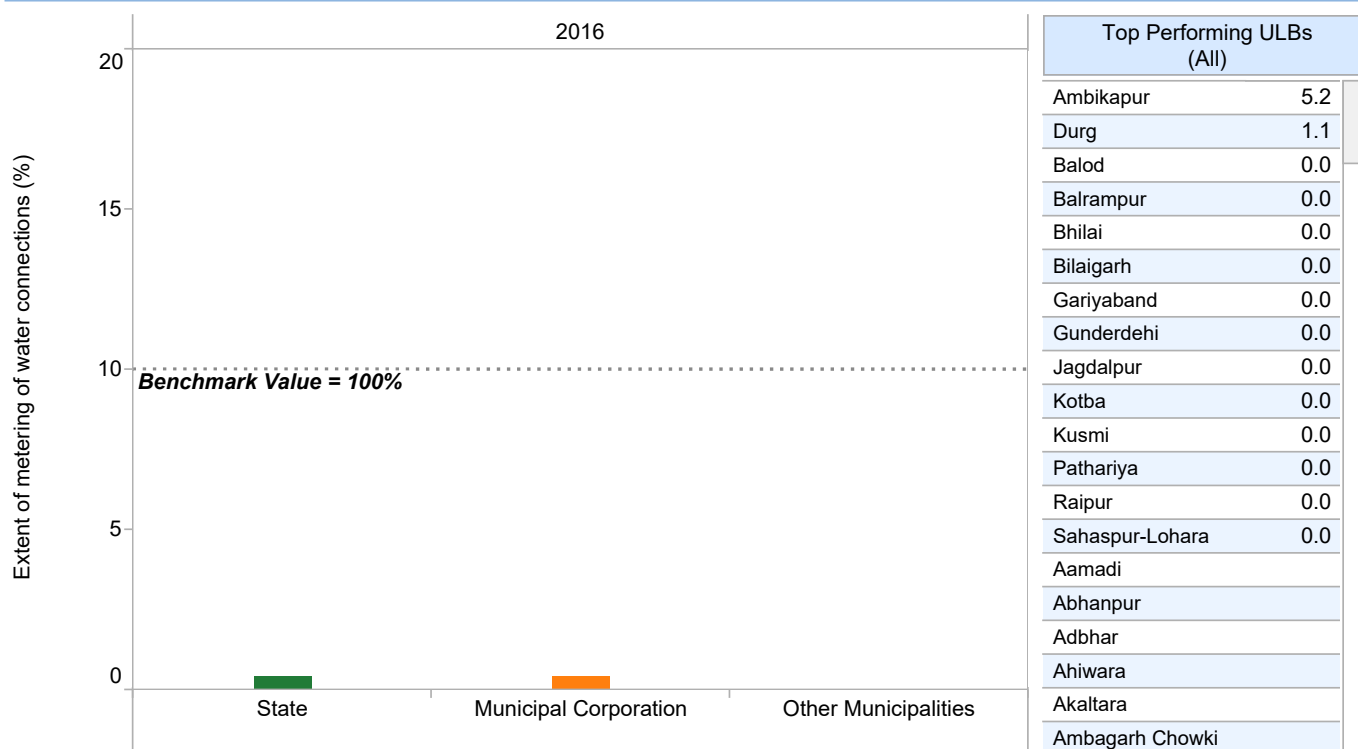

Per capita supply of water (Lpcd)

This indicator captures the quantity of water supplied to consumers daily. This considers only authorized billed and unbilled residential consumers.

Extent of metering of water connections (%)

Total number of functional metered water connections expressed as a percentage of total number of water supply connections (including public stand post connections).

State Level Performance in Water Supply Services: 2016

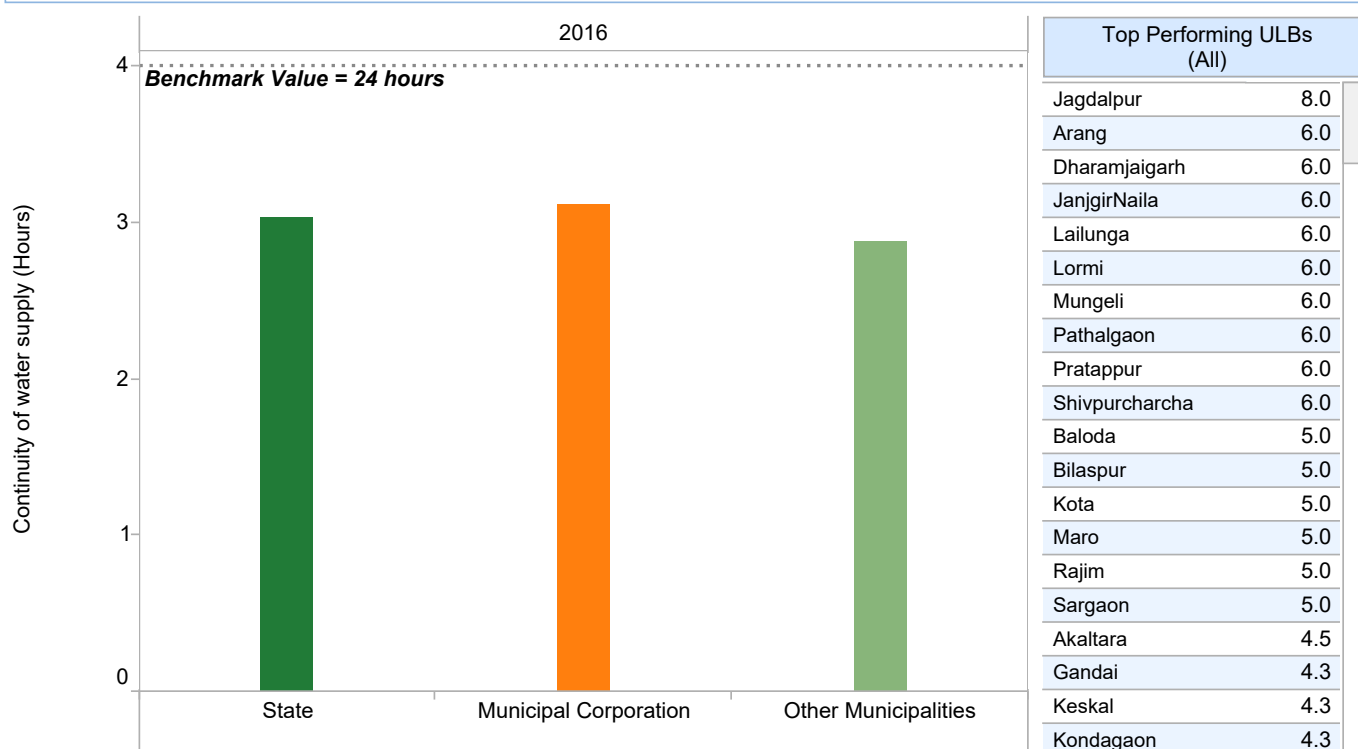

Extent of Non Revenue Water (%)

Difference between total water produced (ex-treatment plant) and total water sold expressed as a percentage of total water produced. NRW includes real as well as apparent losses.

Continuity of water supply (Hours)

Continuity of supply is measured as average number of hours of pressurized water supply per day.

State Level Performance in Water Supply Services: 2016

Quality of water supplied (%)

Percentage of water samples that meet or exceed the specified potable water standards and sampling regime, at treatment plant outlet and consumer points as defined by CPHEEO.

Efficiency in redressal of customer complaints in water supply (%)

Total number of WS related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of water supply related complaints received in the year.

State Level Performance in Water Supply Services: 2016

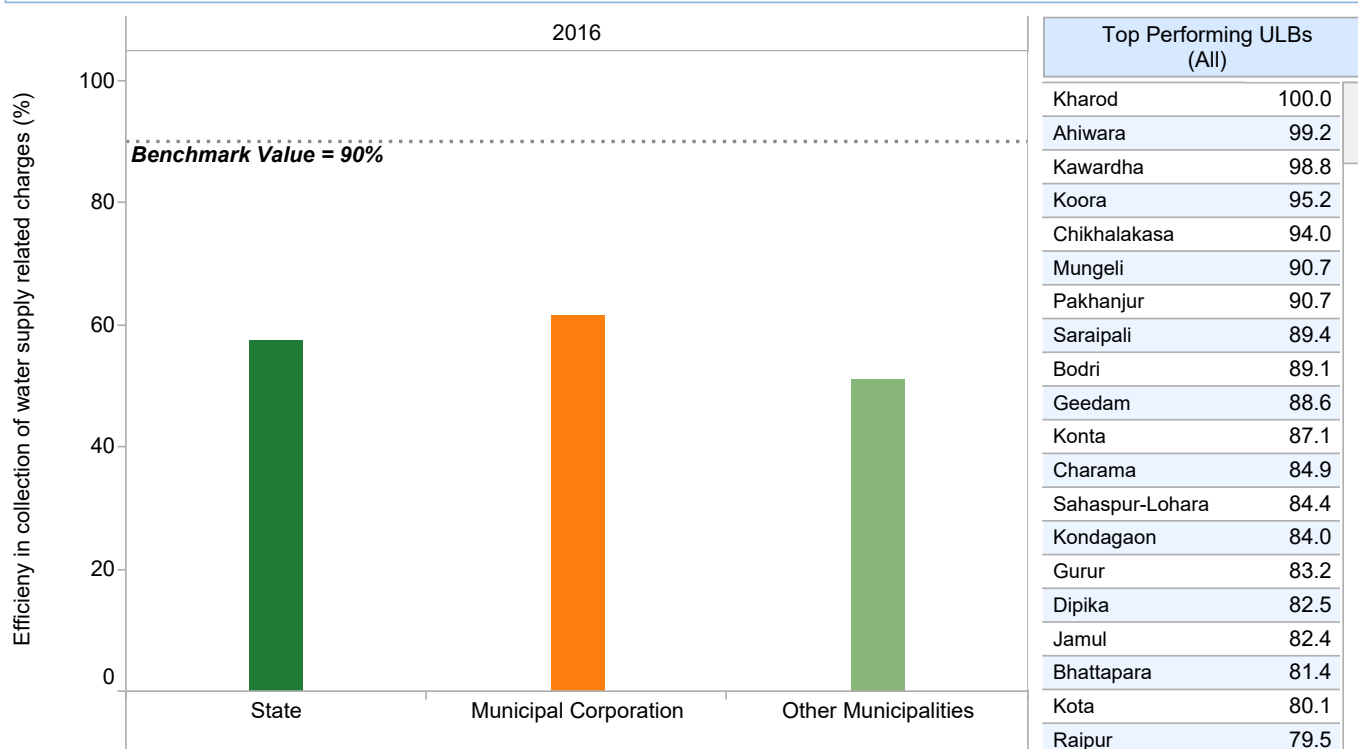

Cost recovery in water supply services (%)

Total operating revenues from water supply related charges expressed as a percentage of total operating expenses on water supply.

Efficiency in collection of water supply related charges (%)

Current year revenues collected from water supply related taxes and charges expressed as a percentage of total billed amounts (for water supply).

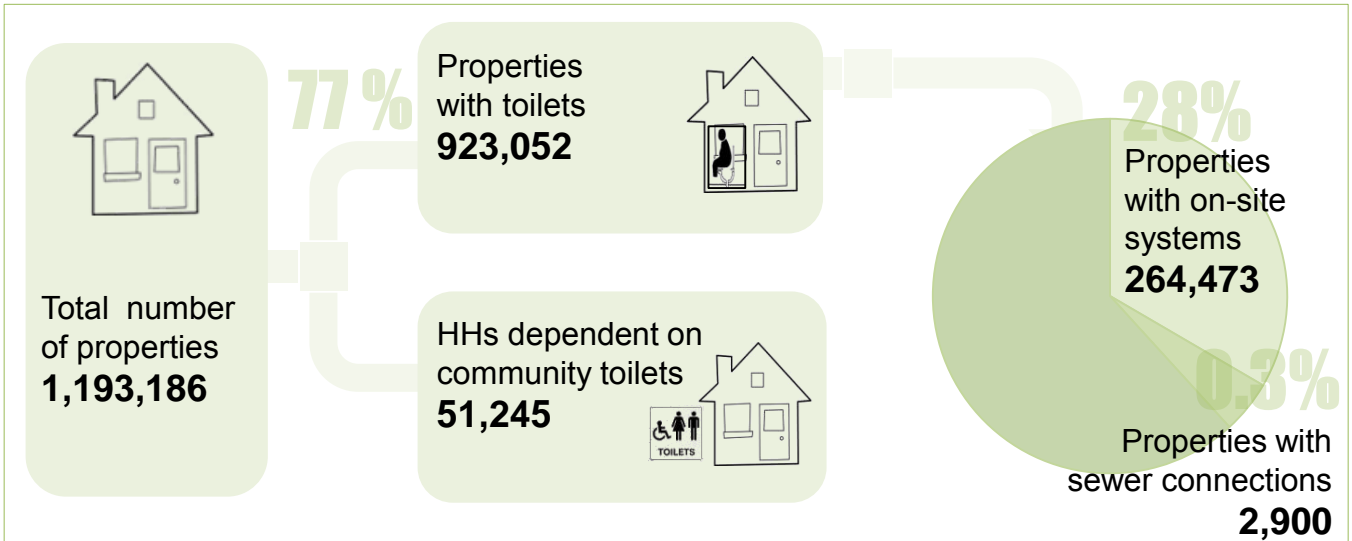

State Profile

Wastewater Management

Wastewater Management: 2015-16

Wastewater Overview

Sewerage System

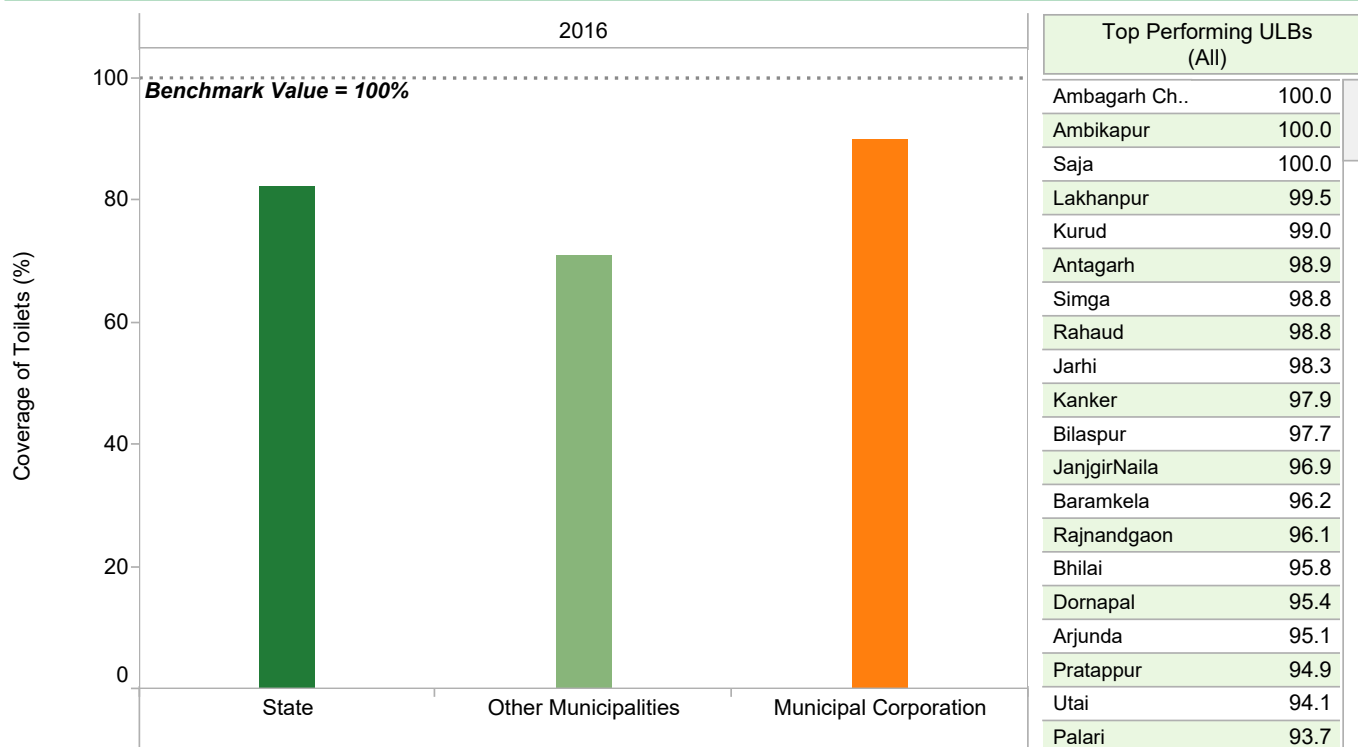

On-site Sanitation System

State Level Performance in Wastewater Management: 2016

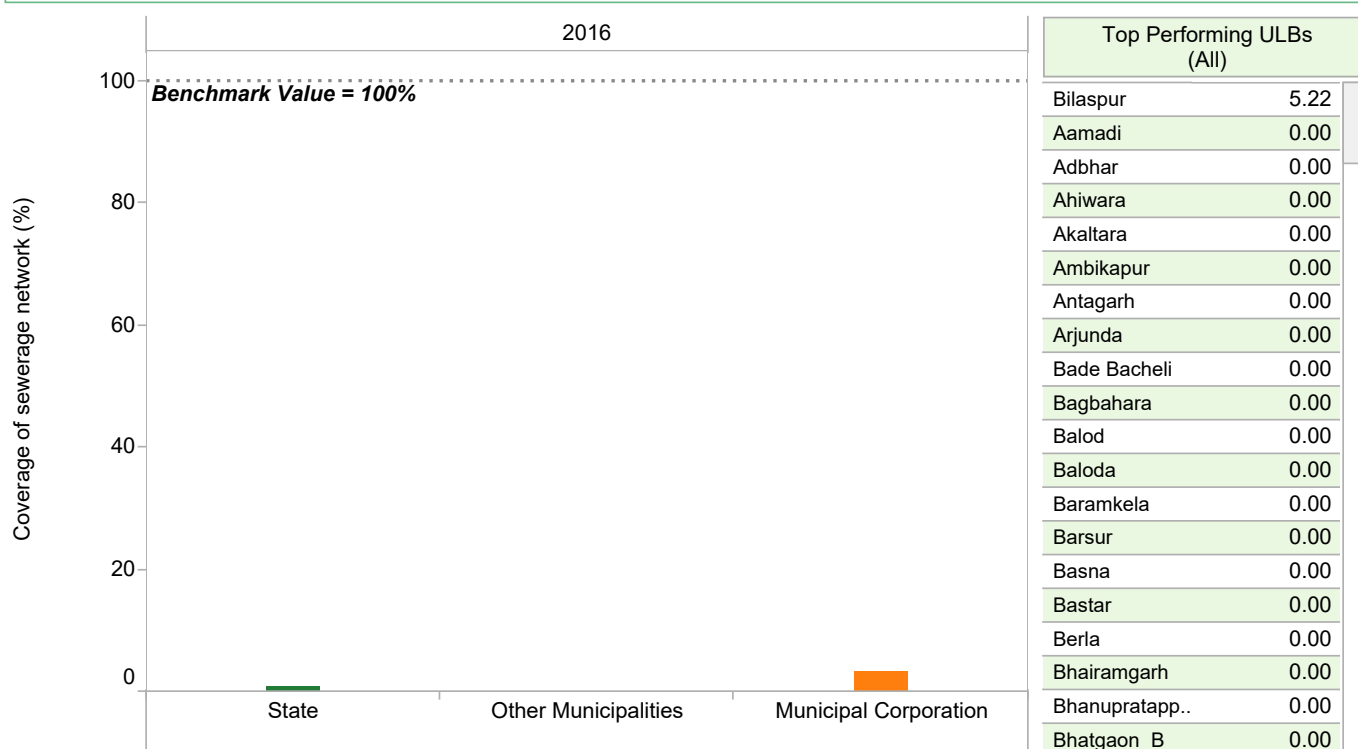

Coverage of Toilets (%)

Total number of properties with access to individual or community toilets as a percentage of total number of properties in the city.

Coverage of sewerage network (%)

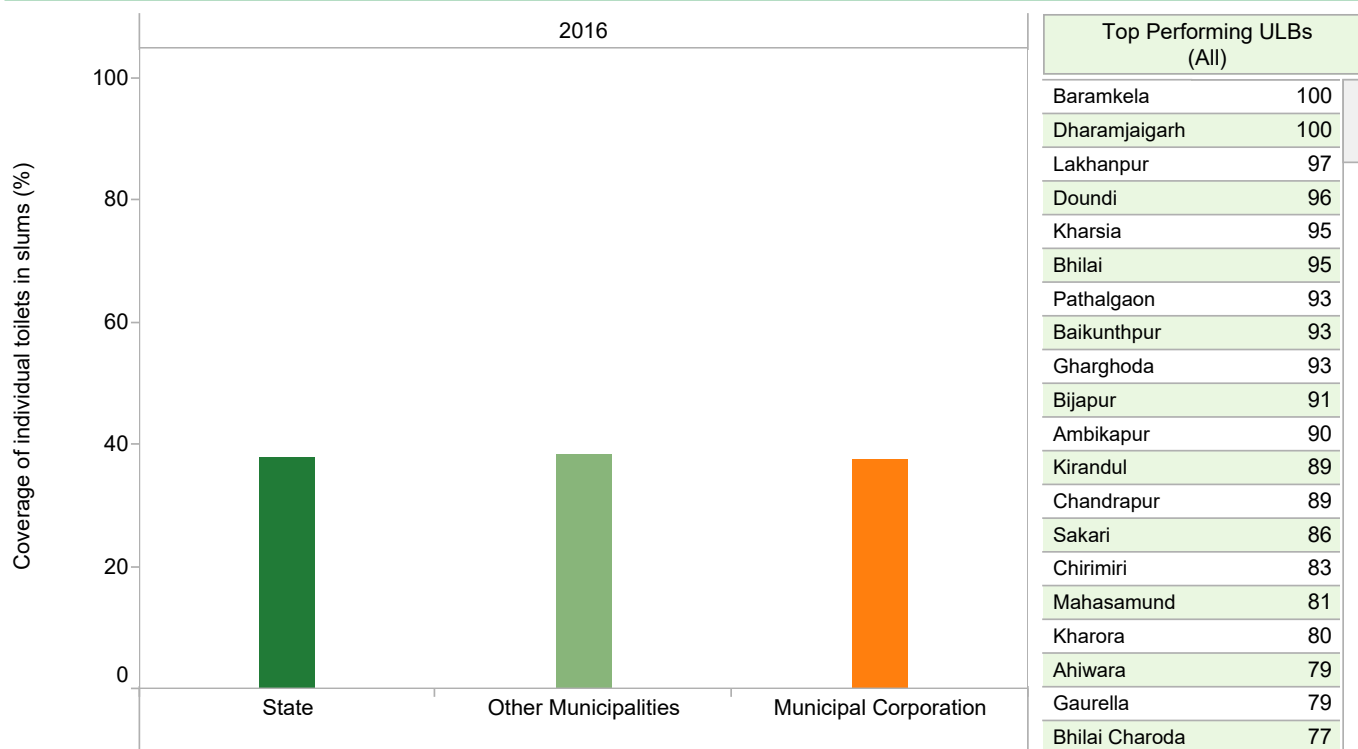

Total number of properties with individual connections to sewage network as a percentage of total number of properties in the city.

State Level Performance in Wastewater Management: 2016

Coverage of individual toilets in slums (%)

Total number of slum households with individual toilets expressed as a percentage of total number of households in 'slum settlements'.

Coverage of wastewater network services in slums (%)

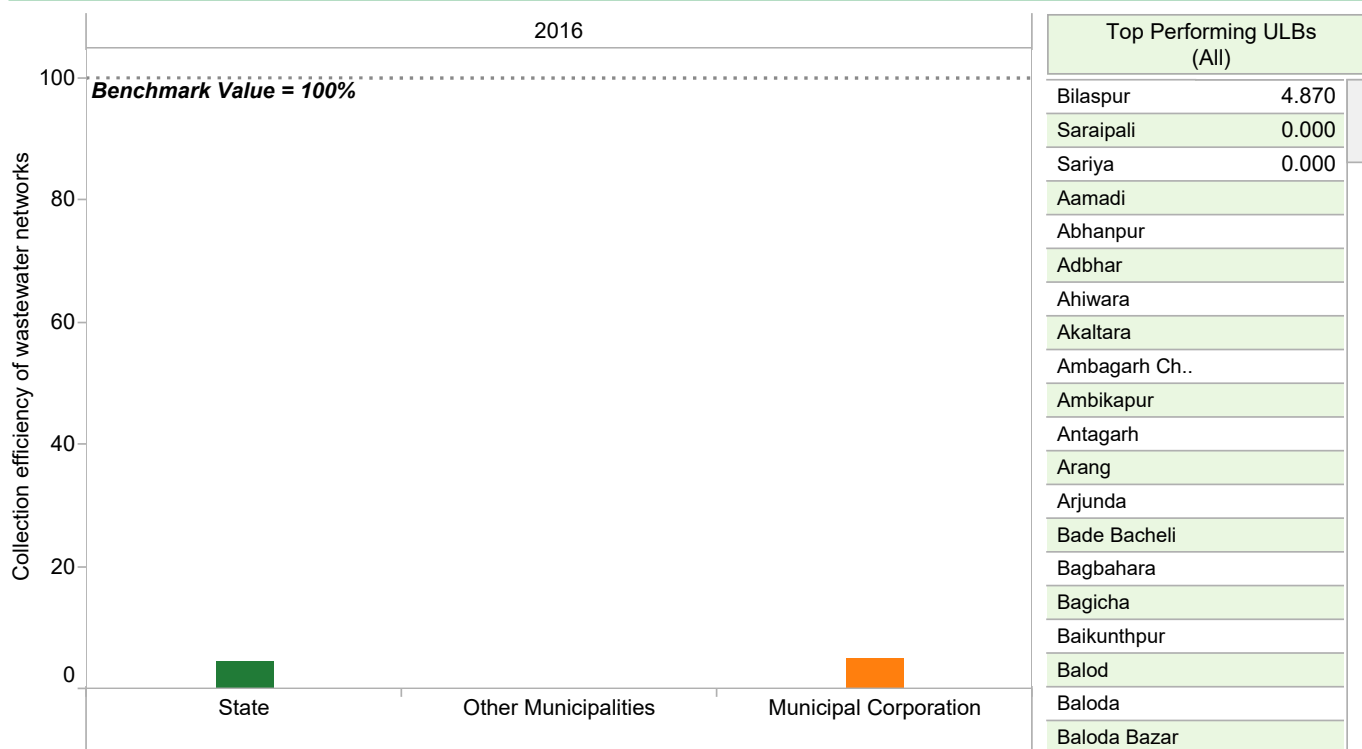

Total number of slum households connected to sewage network expressed as a percentage of total number of households in 'slum settlements'.

State Level Performance in Wastewater Management: 2016

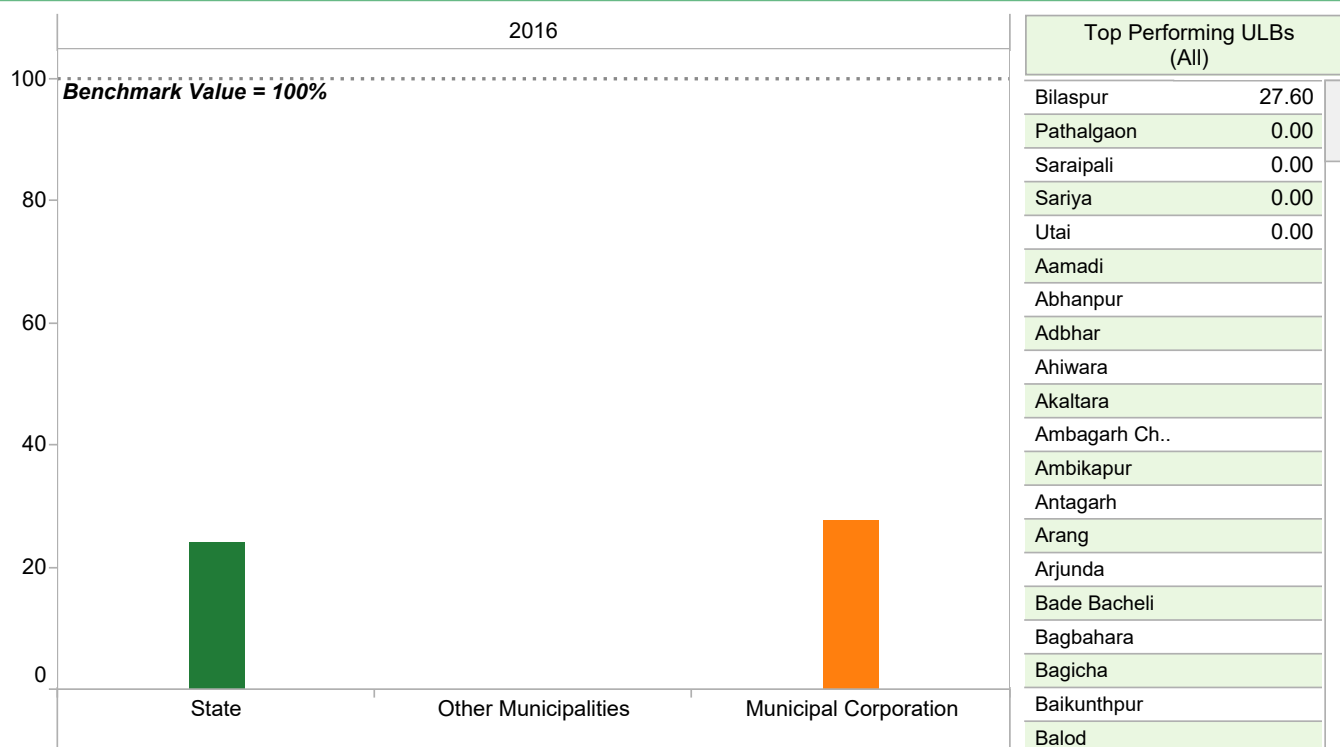

Collection efficiency of wastewater networks (%)

Quantum of waste water collected at the intake of the treatment plant to the quantity of wastewater generated (as per CPHEEO, 80% of water consumed is waste water generated).

Adequacy of wastewater treatment capacity (%)

Quantum of wastewater that can be treated to secondary treatment standards (removal of BOD and COD) as a percentage of normative wastewater generated.

State Level Performance in Wastewater Management: 2016

Quality of wastewater treatment (%)

Total number of waste water samples (BOD and COD) that have passed the specified secondary treatment standards to number of waste water samples conducted, at the outlet of the plant.

Extent of reuse and recycling of treated wastewater (%)

Quantity of waste water that is recycled or reused after secondary treatment as a percentage of quantity of waste water received at the treatment plant.

| | 2016 | Top Performing ULBs (All) | |
|-----------------------|------|---------------------------|-----|
| State | 0.00 | Bilaspur | 0.0 |
| Other Municipalities | 0.00 | Sariya | 0.0 |
| Municipal Corporation | 0.00 | Aamadi | |

Efficiency in redressal of customer complaints in wastewater (%)

Total number of wastewater related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of wastewater related complaints received in the year.

State Level Performance in Wastewater Management: 2016

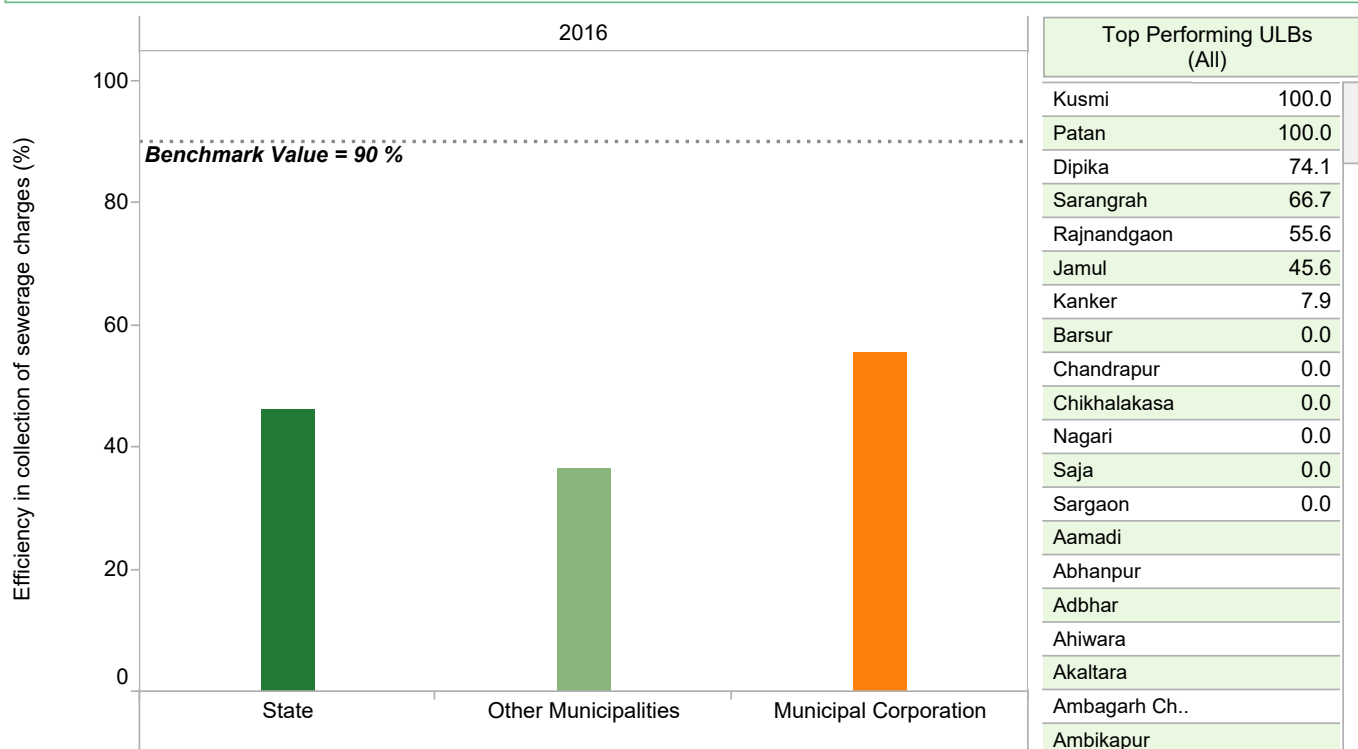

Extent of cost recovery in wastewater management (%)

Total operating revenues from sewerage related charges expressed as a percentage of total operating expenses on wastewater.

Efficiency in collection of sewerage charges (%)

Current year revenues collected from wastewater related taxes and charges expressed as a percentage of total billed amounts (for wastewater).

State Profile

2,468 TPD

Waste at open dump site
2,353 TPD

Waste processed in ULB
77 TPD

Waste at landfill site
0 TPD

State Level Performance in SWM Services: 2016

HH level coverage of SWM services (%)

Total number of households and establishments with door to door collection facility of municipal solid waste (MSW) to the total number of households and establishments in the city.

HH level coverage of SWM services in 'slum settlements' (%)

Total households in slum settlements serviced by door-to-door collection of MSW as a percentage of total number of HHs in slums.

State Level Performance in SWM Services: 2016

Efficiency of collection of municipal solid waste (%)

Quantum of waste that is collected at the treatment/ disposal sites to the total quantity of waste that is generated in the city.

Extent of segregation of municipal solid waste (%)

Quantity of segregated waste received at treatment/ disposal sites to the total waste collected by the service providers.

State Level Performance in SWM Services: 2016

Extent of municipal solid waste recovered (%)

Quantum of waste that is recycled or processed to the total waste that is collected by the service providers.

Efficiency in redressal of customer complaints in SWM (%)

Number of SWM related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of SWM related complaints received in the year.

| | 2016 | Top Performing ULBs (All) |
|-----------------------|------|---------------------------|
| State | 88.1 | Abhanpur 100.0 |
| Other Municipalities | 80.2 | Bagicha 100.0 |
| Municipal Corporation | 93.4 | Baloda 100.0 |

Extent of scientific disposal of municipal solid waste (%)

Quantum of waste that is disposed in scientific/ compliant landfills to the total quantum of waste disposed in compliant and open disposal sites.

State Level Performance in SWM Services: 2016

Extent of cost recovery in SWM services (%)

Percentage of total operating revenues from SWM related charges to total operating expenses on SWM services.

Efficiency in collection of SWM charges (%)

Percentage of current year revenues collected from SWM related taxes and charges as a percentage of total billed amounts (for SWM).

State Level Performance in Storm Water Drainage: 2016

Coverage of storm water drainage network (%)

Percentage of road length covered by storm water drainage network.

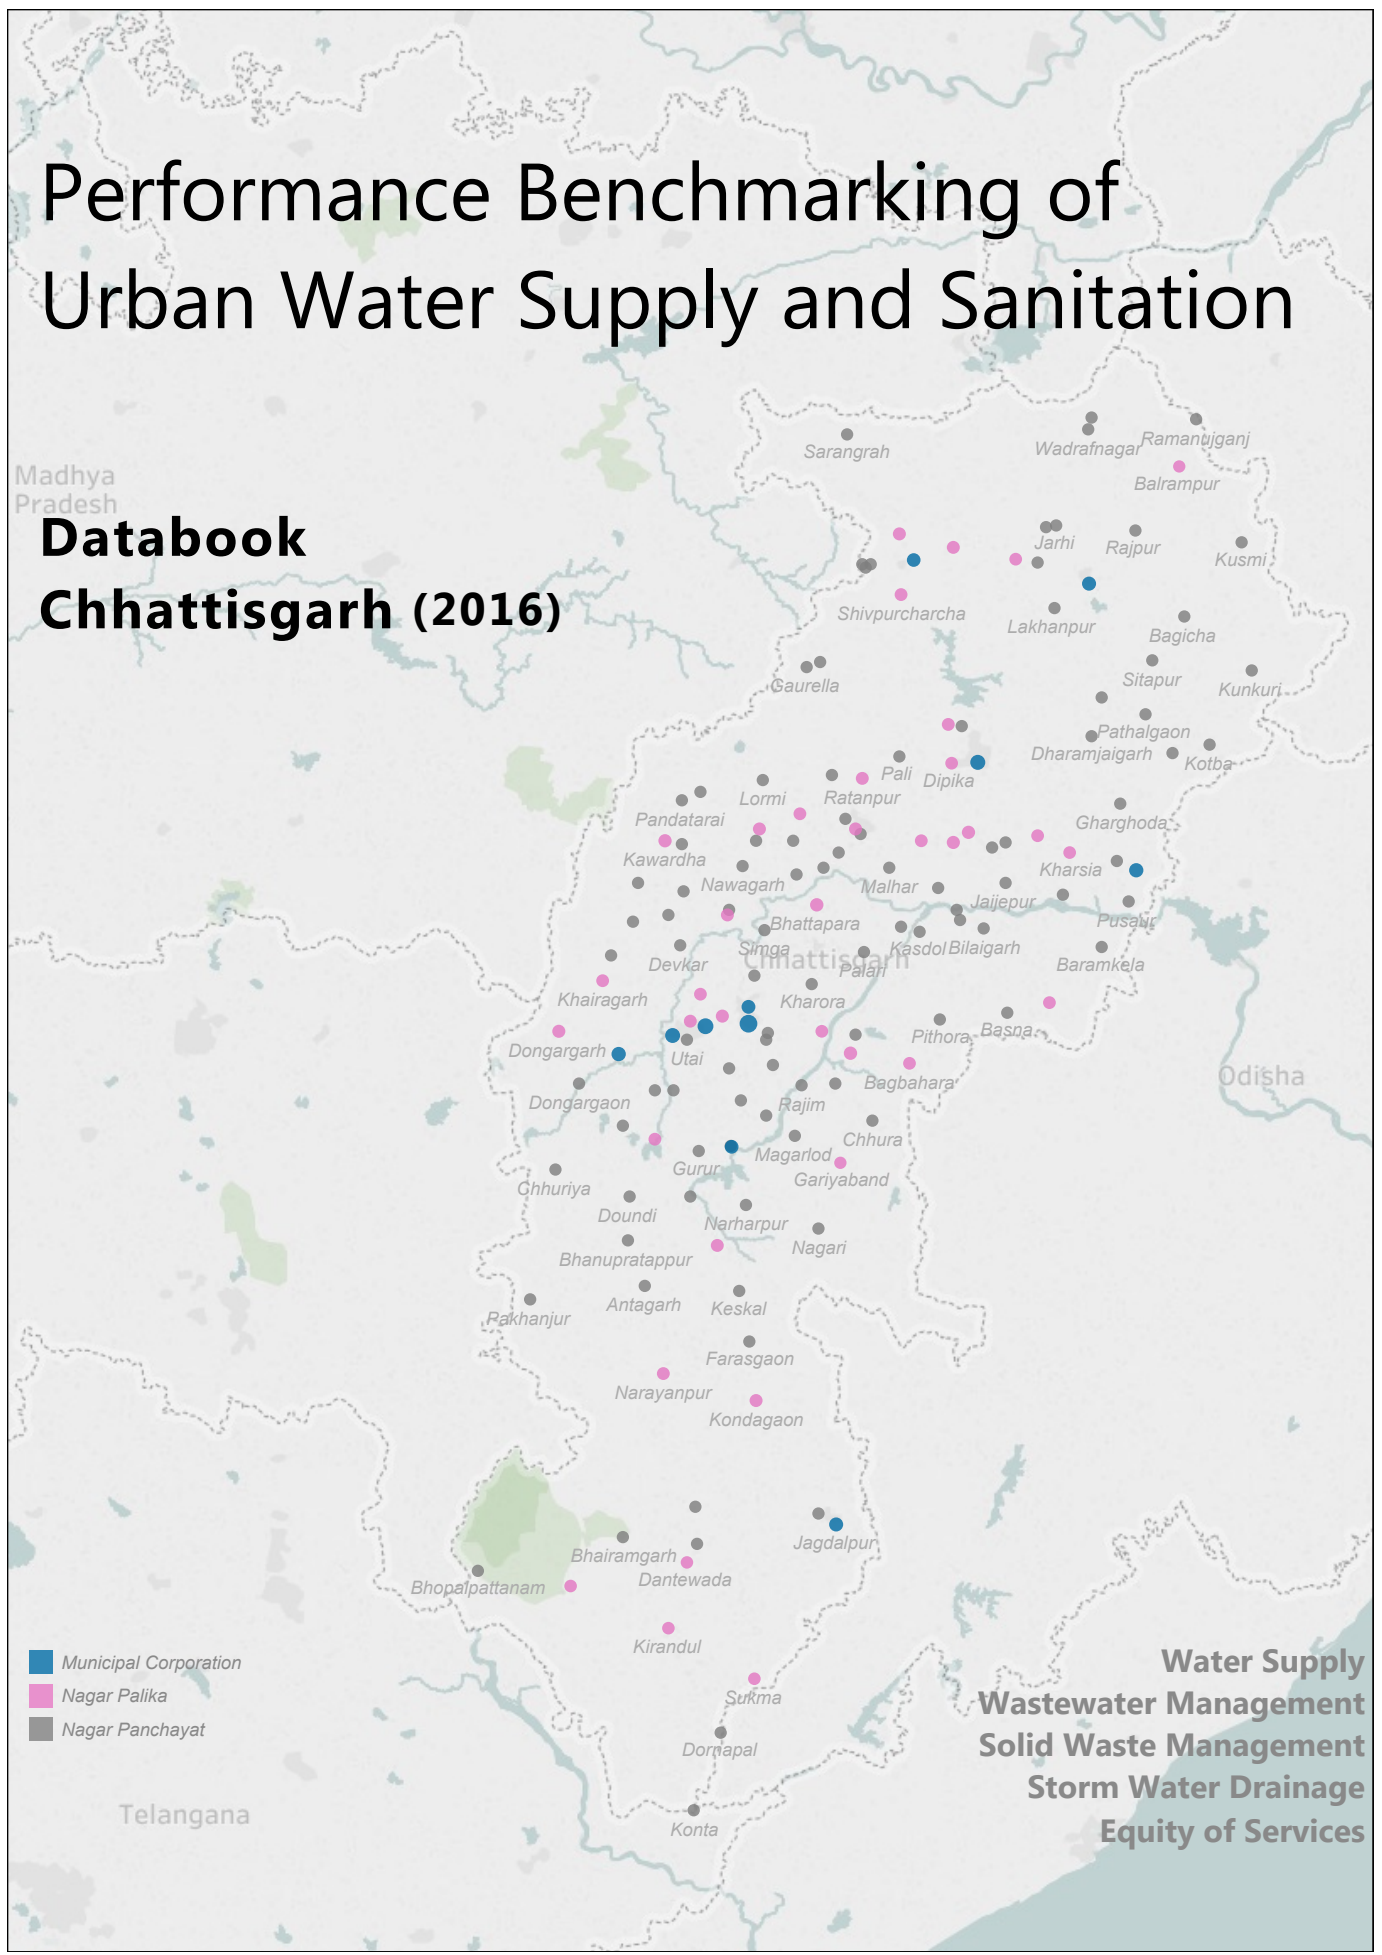

Incidence of water logging/ flooding (%)

Number of times water logging is reported in a year, at flood prone points within the city.

The Performance Assessment System (PAS) Project

The Performance Assessment System – (PAS) is an action research programme, initiated by the CEPT University, Ahmedabad, with funding from the Bill and Melinda Gates Foundation. Since 2009, PAS has supported development of tools, methods and processes for performance assessment and improvement in delivery of urban water and sanitation services. It works with all levels of government: national, state and local. Since 2009, the PAS online performance assessment system has been implemented in many states of India. The PAS portal (www.pas.org.in) has information of over 1800 cities.

In recent years PAS programme has focused its work on urban sanitation. It has developed indicators for measuring on-site sanitation, developed framework for citywide sanitation planning considering the full value chain, and supported cities in implementing city sanitation plans that focus on making cities open defecation free (ODF). In support of these efforts, PAS team is working with various agencies on developing innovative sanitation financing mechanisms.
