Introduction

The SLB Initiative

"Measuring service levels of civic agencies implies measuring outcomes, and indirectly also reflects on institutional capacity, financial performance and other parameters. Service level parameters can be measured either from a utility manager's/planner's perspective or from a citizen's or consumer's perspective. In addition, to facilitate comparison between cities, and to assess changes in performance over time, it is important that the performance levels are benchmarked, and monitored" (MoUD, Handbook on Service Level Benchmarks, 2008).

It was in this context, that the Ministry of Urban Development (MoUD) had initiated an exercise to assess Service Level Benchmarks (SLBs). Such benchmarks and monitoring have helped ULBs, State Governments and National government to monitor outcomes of their investments in water and sanitation in the past years. When such monitoring systems are institutionalized, it would also help monitor new centralised and state level programmes, such as the "Swachh Bharat Mission (SBM)", "Jal Jeevan Mission" etc. Sustained benchmarking can help utilities to identify performance gaps and introduce improvements through the sharing of information and best practices, ultimately resulting in better services to people.

The benchmarking process does not stop at the stage of reporting. It was envisaged that cities will develop Information System Improvement Plans (ISIP) and Performance Improvement Plans (PIP). A PIP identifies the performance gaps and identifies key action areas that would lead to performance improvement. An ISIP is to make the process of information collection more reliable and robust. At present, the reliability level of many SLB indicators is low. However, some cities have prepared their ISIP and have begun implementation.

Definition of SLB indicators

The Handbook of Service Level Benchmarking identifies 28 performance indicators under water supply, wastewater management, solid waste management and storm water drainage sectors. The following tables give sector-wise list of the indicators and the respective definitions.

Water Supply Indicators			
	SLB Indicator	Benchmark	Definition
1	Coverage of water supply connections	100%	Total number of households in the service area that are connected to the water supply network with direct service connections, as a percentage of the total number of households in that service area. Service area implies a specific jurisdiction in which service is required to be provided.
2	Per capita supply of water	135 lpcd	Total water supplied to consumers expressed by population served per day.
3	Extent of metering of water connections	100%	The total number of functional metered water connections expressed as a percentage of the total number of water supply connections. Public stand-post connections should also be included.

4	Extent of non-revenue water (NRW)	20%	This indicator highlights the extent of water produced which does not earn the utility any revenue. This is computed as the difference between the total water produced (ex-treatment plant) and the total water sold expressed as a percentage of the total water produced. NRW comprises: a) Consumption which is authorised but not billed, such as public stand-posts; b) Apparent losses such as illegal water connections, water theft and metering inaccuracies; and c) Real losses which are leakages in the transmission and distribution networks.
5	Continuity of water supply	24 hours	Continuity of supply is measured as the average number of hours of pressurised water supply per day. Water pressure should be equal to or more than a head of 7 meter (m) at the ferrule point/meter point for the connection (7 m head corresponds to the ability to supply to a single-storey building).
6	Quality of water supplied	100%	The percentage of water samples that meet or exceed the specified potable water standards, as defined by the Central Public Health and Environmental Engineering Organisation (CPHEEO). The sampling regimen should meet standards and norms laid down.
7	Efficiency in redressal of customer complaints	80%	The total number of water supply-related complaints redressed within 24 hours of receipt of complaint, as a percentage of the total number of water supply- related complaints received in the given time period.
8	Cost recovery in water supply services	100%	The total operating revenues expressed as a percentage of the total operating expenses incurred in the corresponding time period. Only income and expenditure of the revenue account must be considered, and income and expenditure from the capital account should be excluded.
9	Efficiency in collection of water supply- related charges	90%	Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period

Sewerage Management Indicators

	SLB Indicator	Benchmark	Definition
1	Coverage of toilets	100%	This indicator denotes the extent to which citizens have access to a toilet (whether individual or community) in a service area. The toilets would include those in the category of residential, commercial, industrial and institutional properties. The service area implies a specific jurisdiction in which the service is required to be provided.
2	Coverage of sewage network services	100%	This indicator denotes the extent to which the underground sewerage (or sewage collection network) has reached out to individual properties across the service area. Properties include those in the categories of residential, commercial, industrial and institutional. The service area implies a specific jurisdiction in which service is required to be provided.

3	Collection efficiency of the sewage network	100%	This indicator is measured as the quantum of wastewater collected as a percentage of normative sewage generation in the ULB. Wastewater generation is linked to the quantum of water supplied through piped systems, and other sources such as bore wells, when they are very extensively used.
4	Adequacy of sewage treatment capacity	100%	Adequacy is expressed as secondary treatment (that is, removing oxygen demand as well as solids, normally biological) capacity available as a percentage of normative wastewater generation, for the same time period
5	Quality of sewage treatment	100%	Quality of treatment is measured as a percentage of wastewater samples that pass the specified secondary treatment standards, that is, treated water samples from the outlet of STPs are equal to or better than the standards laid down by the Government of India agencies for secondary treatment of sewage. While the samples are collected at the STP outlet and results should be computed per STP, this indicator should be reported at city/ULB level.
6	Extent of reuse and recycling of sewage	20%	The percentage of wastewater received at the treatment plant that is recycled or reused after appropriate treatment for various purposes. This should only consider water that is directly conveyed for recycling or reuse, such as use in gardens and parks, use for irrigation, etc. Water that is discharged into water bodies, which is subsequently used for a variety of purposes, should not be included in this quantum.
7	Efficiency in redressal of customer complaints	80%	The total number of sewage-related complaints redressed within 24 hours of receipt of complaints, as a percentage of the total number of sewage-related complaints received in the given time period.
8	Extent of cost recovery in sewage management	100%	The extent of cost recovery is expressed as wastewater revenues as a percentage of wastewater expenses, for the corresponding time period.
9	Efficiency in collection of sewage charges	90%	Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period.

Solid Waste Management Indicators

	SLB Indicator	Benchmark	Definition
1	Household level coverage of SWM services	100%	Percentage of households and establishments that are covered by a daily doorstep collection system.
2	Efficiency of collection of municipal solid waste	100%	The total waste collected by the ULB and authorized service providers versus the total waste generated within the ULB, excluding recycling or processing at the generation point. (Typically, some amount of waste generated is either recycled or reused by the citizens themselves. This quantity is excluded from the total quantity generated, as reliable estimates will not be available for these).

3	Extent of segregation of municipal solid waste	100%	Percentage of waste from households and establishments that is segregated. Segregation should at least be at the level of separation of wet and dry waste at the source. Ideally, separation should be in the following categories: biodegradable, non-biodegradable and hazardous waste. It is important that waste segregated at the source is transported through the entire chain in a segregated manner. Hence the indicator is based on measurement of waste arriving in a segregated manner at the treatment/disposal site, rather than at the collection point.
4	Extent of municipal solid waste recovered	80%	This is an indication of the quantum of waste collected, which is either recycled or processed. This is expressed in terms of percentage of waste collected.
5	Extent of scientific disposal of municipal solid waste	100%	The amount of waste that is disposed in landfills that have been designed, built, operated and maintained as per standards laid down by Central agencies. This extent of compliance should be expressed as a percentage of the total quantum of waste disposed at landfill sites, including open dump sites.
6	Efficiency in redressal of customer complaints	80%	The total number of SWM-related complaints redressed within 24 hours of receipt of the complaint, as a percentage of the total number of SWM-related complaints received in the given time period.
7	Extent of cost recovery in SWM services	100%	This indicator denotes the extent to which the ULB is able to recover all operating expenses relating to SWM services from operating revenues of sources related exclusively to SWM. It is defined as the total annual operating revenues from SWM as a percentage of the total annual operating expenses on SWM.
8	Efficiency in collection of SWM charges	90%	Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period.

Storm Water Management Indicators

	SLB Indicator	Benchmark	Definition
1	Coverage of storm water drainage network	100%	Coverage is defined in terms of the percentage of road length covered by the storm water drainage network
2	Incidence of water logging/flooding	0	The number of times water logging is reported in a year, at flood prone points within the city.

Equity Related Indicators:

In addition to the indicators defined by MoUD in the SLB framework, PAS Project has made efforts to develop indicators to capture equity concerns in its Performance Measurement Framework. These are defined as below:

	Indicator	Benchmark	Definition
1	Coverage of water supply connections in 'slum settlements'	100%	Total households in slum settlements connected to water supply network with a private (not shared) service connection, as percentage of total households in all slum settlements in the ULB
2	Coverage of household connections to sewerage network in 'slum settlements'		Total number of slum households connected to sewerage network as a percentage of total number of slum households
3	Coverage of individual toilets in 'slum settlements'	100%	Total number of slum households with individual toilets as a percentage of total number of slum households
4	Household level coverage of SWM services in 'slum settlements'	100%	Total households in slum settlements serviced by door-to-door collection of MSW as a percentage of total number of households in slums.

SanBenchmarks - Citywide assessment of sanitation service delivery - Including on-site sanitation

An analysis of available information suggests that only a few cities in India have 100% coverage of sewerage connections. On the other hand, many cities depend fully on onsite sanitation systems. Even in most cities with sewer network, the coverage of network and connections is partial. However, SLB indicators are focused on underground sewerage system and benchmark values for SLB indicators consider city without sewer network as "unsanitised".

As per National Urban Sanitation Policy (NUSP), well managed onsite sanitation systems can also provide good public health and environmental outcomes. Similar recognition of onsite sanitation systems is also now available in the new CPHEEO Manual on sewage and sewerage treatment and advisory note on septage management in urban India issued by the Ministry of Urban Development. It is in this context that CEPT University has prepared a new set of indicators to capture the ground realities of more widely prevalent onsite sanitation systems.

Proposed indicators in the following table capture the full sanitation service chain from toilet access, its containment and conveyance to treatment and reuse or disposal while considering onsite sanitation systems along with the conventional sewerage systems.

The SLBs and SanBenchmarks can be used to track the status of cities on sustainable development goal (SDG) target 6.1 i.e., on providing universal and equitable access to safe and affordable drinking water for all and on SDG indicator 6.2.1a on monitoring the proportion of population using safely managed sanitation services.

	Indicator	Definition
1	Coverage of adequate sanitation system	Percentage of households with individual or group toilets connected with adequate sanitation systems (sewer network/ septic tank / double pit system / other safe system) to total households in the city.
2	Collection efficiency of sanitation system	Weighted average of collection efficiency of each sanitation system, weighted by share of households dependent on each sanitation system.
3	Adequacy of treatment capacity of Sanitation System	Weighted average of adequacy of treatment plant capacity available for each sanitation system, weighted by share of households dependent on each sanitation system.
4	Quality of treatment of sanitation system	Weighted average of quality of treatment of each sanitation system, weighted by share of households dependent on each sanitation system
5	Extent of reuse and recycling in sanitation system	Weighted average of extent of reuse of treated wastewater and sludge after adequate treatment as a percentage of wastewater and sludge received at the treatment plant, weighted by share of household dependent on each sanitation system.

Way forward

The SLB process is gradually being institutionalized at the State level. With availability of on-line portals, it has become easier for ULBs to report the SLBs and monitor their progress over time. As envisaged earlier, the focus of effort now has to be on improving the reliability of data and on improving performance. Towards this end, various tools are available for ULBs to prepare sustainable and affordable action plans.

It is expected that over the coming years ULBs and State governments will use this databook and available online information to:

1. Track Service level delivery of cities
2. Track the status of cities on sustainable development goal no 6 (SDG 6).
3. Compare performance of ULBs with peers
4. Improve ULB Accountability among consumers
5. Identify areas for improvement
6. Use SLB for investment planning

State Level Performance in Urban Water and Sanitation: 2020

Access and Coverage

Coverage related indicators are measured at the smallest unit of a household (HH). For water and sanitation, the indicator measures households served by individual connection/toilets, and for SWM, it measures households served by door to door collection of MSW.

Equity in Service Delivery

Equity in Service Delivery captures the variations in services provided within a city, across all sectors. Moreover, it measures the variations between poor and non-poor sections of the city.

State Level Performance in Urban Water and Sanitation: 2020

Financial Sustainability

Financial sustainability is measured based on the extent of O&M cost recovery in each sector; recovery through local charges and taxes. Another important aspect of financial sustainability is determined by the collection efficiency of service charges for all the sectors.

Extent of Cost Recovery

Efficiency of Collection of Service Charges

State Level Performance in Water Supply Services: 2020

Coverage of water supply connections at HH level (%)

Total households connected to the water supply network with a private (not shared) service connection, as percentage of total households in the ULB.

Coverage of water supply connections in 'slum settlements' (%)

Total households in slum settlements connected to water supply network with a private (not shared) service connection, as percentage of total households in all slum settlements in the ULB.

State Level Performance in Water Supply Services: 2020

Per capita supply of water (Lpcd)

This indicator captures the quantity of water supplied to consumers daily. This considers only authorized billed and unbilled residential consumers.

Extent of metering of water connections (%)

Total number of functional metered water connections expressed as a percentage of total number of water supply connections (including public stand post connections).

State Level Performance in Water Supply Services: 2020

Extent of Non Revenue Water (%)

Difference between total water produced (ex-treatment plant) and total water sold expressed as a percentage of total water produced. NRW includes real as well as apparent losses.

Continuity of water supply (Hours)

Continuity of supply is measured as average number of hours of pressurized water supply per day.

State Level Performance in Water Supply Services: 2020

Quality of water supplied (%)

Percentage of water samples that meet or exceed the specified potable water standards and sampling regime, at treatment plant outlet and consumer points as defined by CPHEEO.

Efficiency in redressal of customer complaints in water supply (%)

Total number of water supply related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of water supply related complaints received in the year.

State Level Performance in Water Supply Services: 2020

Cost recovery in water supply services (%)

Total operating revenues from water supply related charges expressed as a percentage of total operating expenses on water supply.

Efficiency in collection of water supply related charges (%)

Current year revenues collected from water supply related taxes and charges expressed as a percentage of total billed amounts (for water supply).

State Profile

Wastewater Management

Wastewater Management Chhattisgarh 2020

Access, Containment and Conveyance

Sewerage system

Onsite systems

State Level Performance in Wastewater Management: 2020

Coverage of Toilets (%)

Total number of properties with access to individual or community toilets as a percentage of total number of properties in the city.

Coverage of Adequate Sanitation Systems (%)

Total number of properties with individual connections to sewage network as a percentage of total number of properties in the city. (SLB Indicator).

Total number of households covered with adequate sanitation systems- sewer network, septic tank, double pit system or other safe system (SanBenchmarks - revised sanitation indicator).

State Level Performance in Wastewater Management: 2020

Coverage of individual toilets in slums (%)

Total number of slum households with individual toilets expressed as a percentage of total number of households in 'slum settlements'.

Coverage of wastewater network services in slums (%)

Total number of slum households connected to sewage network expressed as a percentage of total number of households in 'slum settlements'.

State Level Performance in Wastewater Management: 2020

Collection efficiency of sanitation system (%)

Quantum of wastewater collected at the intake of the treatment plant to the quantity of wastewater generated (as per CPHEEO, 80% of water consumed is waste water generated). (SLB Indicator).
Weighted average of collection efficiency of sewerage, septage and grey water (SanBenchmarks - revised sanitation indicator).

Adequacy of treatment capacity of sanitation system (%)

Quantum of wastewater that can be treated to secondary treatment standards (removal of BOD and COD) as a percentage of normative wastewater generated.(SLB Indicator).
Weighted average of adequacy of treatment plant capacity available for sewerage, septage and grey water(SanBenchmarks - revised sanitation indicator).

State Level Performance in Wastewater Management: 2020

Quality of treatment of sanitation system (%)

Total number of waste water samples (BOD and COD) that have passed the specified secondary treatment standards to number of waste water samples conducted, at the outlet of the plant.(SLB Indicator).

Weighted average of quality of treatment of sewerage, septage and grey water(SanBenchmarks - revised indicator).

Extent of reuse and recycling in sanitation system (%)

Quantity of sewage that is recycled or reused after secondary treatment as a percentage of quantity of waste water received at the treatment plant.

SanBenchmarks - revised indicator including onsite systems

	2020	Top Performing ULBs
State	0.00	
Municipal Corporation	0.00	
Other Municipalities	0.00	

Efficiency in redressal of customer complaints in wastewater (%)

Total number of wastewater related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of wastewater related complaints received in the year.

State Level Performance in Wastewater Management: 2020

Extent of cost recovery in wastewater management (%)

Total operating revenues from sewerage related charges expressed as a percentage of total operating expenses on wastewater.

Efficiency in collection of sewerage charges (%)

Current year revenues collected from wastewater related taxes and charges expressed as a percentage of total billed amounts (for wastewater).

State Level Performance in SWM Services: 2020

HH level coverage of SWM services (%)

Total number of households and establishments with door to door collection facility of municipal solid waste (MSW) to the total number of households and establishments in the city.

HH level coverage of SWM services in slum (%)

Total households in slum settlements serviced by door-to-door collection of MSW as a percentage of total number of HHs in slums.

State Level Performance in SWM Services: 2020

Efficiency of collection of municipal solid waste (%)

Quantum of waste that is collected at the treatment/ disposal sites to the total quantity of waste that is generated in the city.

Extent of segregation of municipal solid waste (%)

Quantity of segregated waste received at treatment/ disposal sites to the total waste collected by the service providers.

State Level Performance in SWM Services: 2020

Extent of municipal solid waste recovered (%)

Quantum of waste that is recycled or processed to the total waste that is collected by the service providers.

Efficiency in redressal of customer complaints in SWM (%)

Number of SWM related complaints redressed within time as stipulated in service charter of the ULB, as a percentage of the total number of SWM related complaints received in the year.

	2020	Top Performing ULBs	
State	84.7	Balod	100.0
Municipal Corporation	79.9	Balrampur	100.0
Other Municipalities	93.5	Bastar	100.0
		Bhilai	100.0

Extent of scientific disposal of municipal solid waste (%)

Quantum of waste that is disposed in scientific/ compliant landfills to the total quantum of waste disposed in compliant and open disposal sites.

State Level Performance in SWM Services: 2020

Extent of cost recovery in SWM services (%)

Percentage of total operating revenues from SWM related charges to total operating expenses on SWM services.

Top Performing ULBs

Maro	140.5
Aamadi	136.8
Kirodimalnagar	131.4
Dongargaon	126.8
Berla	118.9
DalliRajhara	109.8
Balod	109.0
Charama	100.0
Magarlod	96.6
Sahaspur-Loh..	95.3
Bemetara	94.7
BadeBacheli	94.3
Visrampur	93.4
Baramkela	92.7
Jarhi	92.6
Nagari	91.8
Pandatarai	91.0
Dabhra	90.6
Narayanpur	88.9
Konta	85.8
Nawagarh	85.1

Efficiency in collection of SWM charges (%)

Percentage of current year revenues collected from SWM related taxes and charges as a percentage of total billed amounts (for SWM).

Top Performing ULBs

Durg	94.8
Chhuikhdan	94.3
Kharora	92.4
Bagbahara	90.1
Patan	87.9
Kanker	86.3
Shivrinarayan	85.6
Bhanupratapp..	85.3
Gurur	81.7
Kunkuri	81.6
Dantewada	81.6
Ambagarh Ch..	80.6
Gunderdehi	79.0
Rajnandaon	79.0
Dharamjaigarh	78.0
Arjunda	77.7
Ambikapur	76.5
Chikhalaikasa	74.6
Geedam	74.2
Narharpur	73.9
Chhura	71.9

State Level Performance in Storm Water Drainage: 2020

Coverage of storm water drainage network (%)

Percentage of road length covered by storm water drainage network.

Incidence of water logging/ flooding (%)

Number of times water logging is reported in a year, at flood prone points within the city.

Part - 2

City Profiles

City profiles
Municipal Corporation

Ambikapur (Chhattisgarh) : ULB Overview for 2020

Class : Municipal Corporation

General Information

	2020
Area (Sq. Km)	35.4
Population	161,864
Households	31,910
Slum Population	14,657
Slum Households	2,891
Capital Receipts (Millions Rs)	585.6
Capital Expenditure (Millions Rs)	561.3
Revenue Receipts (Millions Rs)	173.2
Revenue Expenditure (Millions Rs)	235.4

Water Supply

	2020
Total water produced (MLD)	19.9
Surface sources (MLD)	18.2
Ground sources (MLD)	1.7
Other sources (MLD)	0.0
Area covered by water supply network (Sq. Km)	36
Total water supply connections	17,784
Water connections in slums	2,891
Days of supply per month	30

Financial Information

Wastewater Management

	2020
HHs with individual toilets in the city	31,546
HHs dependent on functional community toilets	364
Properties with sewer connection	0
Total sewerage connections in slums	ND
Properties with onsite sanitary disposal	22,100
Total wastewater generated (MLD)	14
WW treated including onsite system (MLD)	0

Financial Information

Solid Waste Management

	2020
Door to Door collection - HHs and Estbs	32,960
Door to Door collection - slums	2,891.0
Waste Generated (TPD)	60.6
Waste collected (TPD)	60.6
Total waste processed in the ULB (TPD)	55.9
Waste disposed in compliant landfill sites (TPD)	ND
Waste disposed in open dump sites (TPD)	0.0

Sector Performance for 2020 : Wadrafnagar(Chhattisgarh)

The Performance Assessment System (PAS) Project

The ‘Performance Assessment System – PAS’ is a five-year action research project, initiated by the CEPT University, Ahmedabad, with funding from the Bill and Melinda Gates Foundation. It supports development of appropriate tools and methods to measure, monitor and improve delivery of urban water and sanitation services in the states of Gujarat and Maharashtra. The PAS Project comprises three components of performance measurement, monitoring and improvement.

CWAS

The Center for Water and Sanitation (CWAS) is a part of CEPT Research and Development Foundation (CRDF) at CEPT University. CWAS undertakes action-research, implementation support, capacity building and advocacy in the field of urban water and sanitation. Acting as a thought catalyst and facilitator, CWAS works closely with all levels of governments - national, state and local to support them in delivering water and sanitation services in an efficient, effective and equitable manner.
